Closed Ended Questionnaire Data Analysis

Closed questions collect data that can be used to draw generalized conclusions based on statistical analysis. Open ended questions ask respondents to describe a subject. You'd then look for trends and patterns in the in the responses you've collected. Think of these question styles as 'tasks' with different outputs. However, the quality of data you collect depends the way you write questions. E.g. If you write leading questions, your data will not be accurate. Learn how to write ...

Abstract. A KeyGraph-like algorithm, which incorporates the concept of structural importance with association rules mining, for analyzing closed-ended questionnaire data is presented in this paper. The proposed algorithm transforms the questionnaire data into a directed graph, and then applies association rules mining and clustering procedures, whose parameters are determined by gradient sensitivity analysis, as well as correlation analysis in turn to the graph.
