Incomplete Dominance & Codominance - The Biology Corner

Incomplete Dominance: Definition, Examples, and Practice Problems. You may already know that in the study of genetics, dominance refers to the relationship between alleles, which are two forms of a gene. In a dominant relationship between alleles, one allele "masks" the other and influences a specific trait. When the phenotype (the observable characteristic) of the heterozygote is identical to the dominant homozygote, the relationship is considered to be "complete dominance."

Incomplete Dominance: Definition, Examples, and Practice ...

Closely related to incomplete dominance is codominance, in which both alleles are simultaneously expressed in the heterozygote. We can see an example of codominance in the MN blood groups of humans (less famous than the ABO blood groups, but still important!). A person's MN blood type is determined by his or her alleles of a certain gene.
