Which Way Did The Bicycle

Of course, the back wheel will obliterate the front track irrespective of the direction of travel, so this says nothing about which way the bicycle was going. Even Holmes nods. Answer to Puzzle. In Fig. 2, the bike in the top panel is travelling towards the left, that in the lower panel towards the right. Sources

Which Way did the Bicycle Go? | ThatsMaths

The front wheel of the bicycle can turn left and right, but the back wheel of a bicycle is fixed in its frame. This means that the more “stable” track is likely to be the back-wheel track and the wobblier one the front wheel track. After some mulling time, next ask. You said that the back wheel is more “stable.”.

I found this puzzle which simply asks which way was the bicycle going, from its wheel marks on the mud shown in the image. Now there is a simple way to find which mark (line) was made by the front and which was made by the rear wheel because. We know that the tangent drawn anywhere on the line drawn by the rear wheel will always cut the line made by the front wheel .
