Abstract In this chapter we show that any 2π -periodic fuzzy continuous function from $\mathbb{R}$ to the fuzzy

number space $\mathbb{R}^F$, can be uniformly approximated by some fuzzy trigonometric polynomials. This chapter is based on.

Therefore, it is important to analyze the approximation mechanism of fuzzy systems. The general approximation of a fuzzy system refers to whether the fuzzy system can approximate any continuous function defined on a compact set with arbitrary precision. At present, the research on fuzzy systems as universal approximators is mainly divided into two aspects.
