Surface Modification Of Magnesium And

The easiest way to reduce the corrosion of Mg products is the surface modification/coating, which provides a significant barrier between the implant and physical environment. Surface coating can also improve the mechanical properties of the implant by tailoring the coating composition and structure , .

Surface modification of Magnesium and its alloy as ...

Surface modification of magnesium and its alloys for biomedical applications: Biological interactions, mechanical properties and testing, the first of two volumes, is an essential guide on the use of magnesium as a degradable implant material. Due to their excellent biocompatibility and biodegradability, magnesium based degradable implants provide a viable option for the permanent metallic implants.

Surface Modification of Magnesium and its Alloys for ...

In this chapter, a review of the state of the art in biomimetic surface modification of magnesium and its alloys is discussed. Three key areas of research are explored, including surface modifications that mimic the extracellular matrix, deposition of calcium phosphate coatings, and the development of superhydrophobic coatings that mimic the topography and surface chemistry of natural plant systems.

Surface Modification of Magnesium and its Alloys for ...

Surface modification is of great attraction in optimizing and tailoring the corrosive behavior of biomedical magnesium and its alloys to match the rates of tissue healing. After having undergone various types of surface-treating techniques, the naked substrates of magnesium and its alloys are covered with a layer of protective polymer, ceramic, or composite coatings.

In order to improve the compatibility between magnesium hydroxide (MH) and polymer matrix, the surface of MH was modified using vinyltriethoxysilane (VTES) by dry process and the interfacial interaction between MH and VTES was also studied.

Surface modification of magnesium hydroxide using ...

Wet process was adopted to modify surface of magnesium hydroxide (MH) using triethoxyvinylsilane (VTES). The VTES modified MH (VTES-MH) showed good compatibility to silicone rubbers (SR) even at high MH loading amount (50%). A high limit oxygen index (LOI) of 40.2% was achieved at 5:5 SR/VTES-MH radio.

Therefore, how to decese degradation rate of pure magnesium or its alloys is one of the focuses in Research and Development (R&D) of medical implants. It has been recognized that surface modification is an effective method to prevent its initial degradation in vivo to maintain its desired mechanical strength.

Surface modification of magnesium alloys developed for ...

In this study, surface modification of pure magnesium mesh was conducted by plasma electrolytic oxidation and hydrothermal treatment to form a densely protective layer on the Mg substrate. The protective layer mainly consisted of Mg(OH) 2 with the amorphous calcium phosphate. Then, weight loss measurement and Micro-CT imaging were performed after an immersion test in a simulated body fluid.
