Which Equation Has No Solution

Let us solve the equation $5x - 2 + 3x = 3(x+4) + 5x - 14$. In solving this equation, we follow the same process as in steps 1 through 3 and we have the equivalent equation $8x - 2 = 8x - 2$. Here, we collect our x-terms on the left side of the equal sign and our constant terms on the right side, thus giving us the equation $0x = 0$ which is equal to $0=0$, which is a true statement.

Sometimes equations have no solution. This means that no matter what value is plugged in for the variable, you will ALWAYS get a contradiction. Watch this tutorial and learn what it takes for an equation to have no solution.

What Does It Mean When An Equation Has No Solution ...

If the discriminant is less than 0, the equation has no real solution. Looking at the graph of a quadratic equation, if the parabola does not cross or intersect the x-axis, then the equation has no real solution. And no real solution does not mean that there is no solution, but that the solutions are not real numbers. So I hope that these key points and examples helped you understand a little bit more about solving quadratic equations with no real solution.
