Daring Democracy

Igniting Power, Meaning, and Connection for the America We Want *Beacon Press*

An optimistic book for Americans who are asking, in the wake of Trump’s victory, What do we do now? The answer: We need to organize and fight to protect and expand our democracy. Americans are distraught as tightly held economic and political power drowns out their voices and values. Legendary Diet for a Small Planet author Frances Moore Lappé and organizer-scholar Adam Eichen offer a fresh, surprising response to this core crisis. This intergenerational duo opens with an essential truth: It’s not the magnitude of a challenge that crushes the human spirit. It’s feeling powerless—in this case, fearing that to stand up for democracy is futile. It’s not, Lappé and Eichen argue. With riveting stories and little-known evidence, they demystify how we got here, exposing the well-orchestrated effort that has robbed Americans of their rightful power. But at the heart of this unique book are solutions. Even in this divisive time, Americans are uniting across causes and ideologies to create a “canopy of hope” the authors call the Democracy Movement. In this invigorating “movement of movements,” millions of Americans are leaving despair behind as they push for and achieve historic change. The movement and democracy itself are vital to us as citizens and fulfill human needs—for power, meaning, and connection—essential to our thriving. In this timely and necessary book, Lappé and Eichen offer proof that courage is contagious in the daring fight for democracy.

The Restore-Our-Planet Diet

Food Choices, Our Environment, and Our Health *Patricia Tallman*

Are you an environmentalist—championing wise water usage, clean oceans, and a reduction in greenhouse gases? Are you interested in permanent weight loss, disease prevention, and optimal nutrition? This book demonstrates how a plant-based diet directly addresses all these concerns. Dr. Patricia Tallman explains why the most effective action you can take to mitigate climate change, water pollution, rainforest destruction, and water shortages also will enable you to combat diabetes, obesity, cardiovascular disease, and cancer. Several chapters are devoted to illustrating the profound environmental savings that would result from leaving meat and dairy off your menu. For instance, simply replacing beef in a Sloppy Joes recipe with a plant-based protein generates the following savings per serving: 1,670 liters (441 US gal) of water; 4.4 kg (9.7 pounds) of manure; and enough greenhouse gas to drive 10.7 km (6.7 miles)! Equally astonishing, a plant-based version of this traditional dish contains 25 percent fewer calories and 50 percent less total fat, eliminates 8 grams of saturated fat and all 80 grams of cholesterol, and yet provides virtually the same amount of protein and iron. By choosing tasty, nutritious recipes like those found in these pages, you can enhance your health and reduce your risk of many diseases, while protecting our threatened environment in a multitude of ways. Eating Tomorrow**Agribusiness, Family Farmers, and the Battle for the Future of Food** *The New Press*

"A powerful polemic against agricultural technology." —Nature A major new book that shows the world already has the tools to feed itself, without expanding industrial agriculture or adopting genetically modified seeds, from the Small Planet Institute expert Few challenges are more daunting than feeding a global population projected to reach 9.7 billion in 2050—at a time when climate change is making it increasingly difficult to successfully grow crops. In response, corporate and philanthropic leaders have called for major investments in industrial agriculture, including genetically modified seed technologies. Reporting from Africa, Mexico, India, and the United States, Timothy A. Wise’s *Eating Tomorrow* discovers how in country after country agribusiness and its well-heeled philanthropic promoters have hijacked food policies to feed corporate interests. Most of the world, Wise reveals, is fed by hundreds of millions of small-scale farmers, people with few resources and simple tools but a keen understanding of what and how to grow food. These same farmers—who already grow more than 70 percent of the food eaten in developing countries—can show the way forward as the world warms and population increases. Wise takes readers to remote villages to see

how farmers are rebuilding soils with ecologically sound practices and nourishing a diversity of native crops without chemicals or imported seeds. They are growing more and healthier food; in the process, they are not just victims in the climate drama but protagonists who have much to teach us all.

The Healthiest Diet on the Planet helps us reclaim our health by enjoying nutritious starches, vegetables, and fruits. McDougall takes on the propaganda machines pushing dangerous, high-fat fad diets and cuts through the smoke and mirrors of the diet industry. Kingdom of the Sick**A History of Leprosy and Japan** *University of Hawaii Press*

In this groundbreaking work, Susan L. Burns examines the history of leprosy in Japan from medieval times until the present. At the center of *Kingdom of the Sick* is the rise of Japan’s system of national leprosy sanatoria, which today continue to house more than 1,500 former patients, many of whom have spent five or more decades within them. Burns argues that long before the modern Japanese government began to define a policy toward leprosy, the disease was already profoundly marked by ethical and political concerns and associated with sin, pollution, heredity, and outcast status. Beginning in the 1870s, new anxieties about race and civilization that emanated from a variety of

civic actors, including journalists, doctors, patent medicine producers, and Christian missionaries transformed leprosy into a national issue. After 1900, a clamor of voices called for the quarantine of all sufferers of the disease, and in the decades that followed bureaucrats, politicians, physicians, journalists, local communities, and leprosy sufferers themselves grappled with the place of the biologically vulnerable within the body politic. At stake in this “citizenship project” were still evolving conceptions of individual rights, government responsibility for social welfare, and the delicate balance between care and control. Refusing to treat leprosy patients as simply victims of state power, Burns recovers their voices in the debates that surrounded the most controversial aspects of sanitarium policy, including the use of sterilization, segregation, and the continuation of confinement long after leprosy had become a curable disease. Richly documented with both visual and textual sources and interweaving medical, political, social, and cultural history, Kingdom of the Sick tells an important story for readers interested in Japan, the history of medicine and public health, social welfare, gender and sexuality, and human rights.

EcoMind

Changing the Way We Think, to Create the World We Want *Bold Type Books*

In EcoMind, Frances Moore Lappé’s giant of the environmental movement confronts accepted wisdom of environmentalism. Drawing on the latest research from anthropology to neuroscience and her own field experience, she argues that the biggest challenge to human survival isn’t our fossil fuel dependency, melting glaciers, or other calamities. Rather, it’s our faulty way of thinking about these environmental crises that robs us of power. Lappé dismantles seven common Öthought trapsÖfrom limits to growth to the failings of democracyÑ that belie what we now know about nature, including our own, and offers contrasting Öthought leapsÓ that reveal our hidden power. Like her Diet for a Small Planet classic, EcoMind is challenging, controversial and empowering.

The Way We Eat Now

How the Food Revolution Has Transformed Our Lives, Our Bodies, and Our World *Basic Books*

An award-winning food writer takes us on a global tour of what the world eats--and shows us how we can change it for the better Food is one of life's great joys. So why has eating become such a source of anxiety and confusion? Bee Wilson shows that in two generations the world has undergone a massive shift from traditional, limited diets to more globalized ways of eating, from bubble tea to quinoa, from Soylent to meal kits. Paradoxically, our diets are getting healthier and less healthy at the same time. For some, there has never been a happier food era than today: a time of unusual herbs, farmers' markets, and internet recipe swaps. Yet modern food also kills--diabetes and heart disease are on the rise everywhere on earth. This is a book about the good, the terrible, and the avocado toast. A riveting exploration of the hidden forces behind what we eat, The Way We Eat Now explains how this food revolution has transformed our bodies, our social lives, and the world we live in.

Can Fixing Dinner Fix the Planet? *JHU Press*

The Changing American Diet

Authorities have called the American diet "pathogenic." The foods we eat contribute to the current epidemics of tooth decay, obesity, heart disease, strokes, diabetes, and cancer. Increasing medical evidence links Americans' high fat diet to heart disease, stroke, and certain forms of cancer. Our growing consumption of sugars causes tooth decay, which costs Americans three billion dollars a year in dental bills alone. Government agencies and health organizations are urging Americans to improve their health by changing their diets. Here, at last, is a clearly written account of what we are eating now and what Americans ate in the early 1900s, putting dietary changes in perspective. -

Routledge Handbook of Food as a Commons *Routledge*

From the scientific and industrial revolution to the present day, food – an essential element of life – has been progressively transformed into a private, transnational, mono-dimensional commodity of mass consumption for a global market. But over the last decade there has been an increased recognition that this can be challenged and reconceptualized if food is regarded and enacted as a commons. This Handbook provides the first comprehensive review and synthesis of knowledge and new thinking on how food and food systems can be thought, interpreted and practiced around the old/new paradigms of commons and commoning. The overall aim is to investigate the multiple constraints that occur within and sustain the dominant food and nutrition regime and to explore how it can change when different elements of the current food systems are explored and re-imagined from a commons perspective. Chapters do not define the notion of commons but engage with different schools of thought: the economic approach, based on rivalry and excludability; the political approach, recognizing the plurality of social constructions and incorporating epistemologies from the South; the legal approach that describes three types of proprietary regimes (private, public and collective) and different layers of entitlement (bundles of rights); and the radical-activist approach that considers the commons as the most subversive, coherent and history-rooted alternative to the dominant neoliberal narrative. These schools have different and rather diverging epistemologies,

vocabularies, ideological stances and policy proposals to deal with the construction of food systems, their governance, the distributive implications and the socio-ecological impact on Nature and Society. The book sparks the debate on food as a commons between and within disciplines, with particular attention to spaces of resistance (food sovereignty, de-growth, open knowledge, transition town, occupations, bottom-up social innovations) and organizational scales (local food, national policies, South–South collaborations, international governance and multi-national agreements). Overall, it shows the consequences of a shift to the alternative paradigm of food as a commons in terms of food, the planet and living beings.
