Confidence in Critical Thinking

Developing Learners in Higher Education *Routledge*

Confidence in Critical Thinking bridges the gap between theory and application for both new and established educators who wish to recognise their own critical-thinking skills, develop them and, in turn, support the development of their learners. By harnessing findings from research on design, engagement, goal setting, coaching, performance and the influence of language, this book: Facilitates educators in moving from thinking about these skills as theoretical concepts to practical application Supports educators in their own personal development Provides practical exercises and ideas for learner skills development Encourages reflection from the educator on their own development. A must-read for those wishing to examine the assumption that critical-thinking development happens to all learners to an equal degree as a natural part of the education process. Confidence in Critical Thinking is for both learners wishing to understand and develop critical-thinking skills and educators wanting to develop their learners’, and their own, critical skills.

Study Guide and Reader to Accompany Educational Psychology

Developing Learners

Handbook of Educational Psychology and Students with Special Needs *Routledge*

Handbook of Educational Psychology and Students with Special Needs provides educational and psychological researchers, practitioners, policy-makers, and graduate students with critical expertise on the factors and processes relevant to learning for students with special needs. This includes students with attention-deficit/hyperactivity disorder, other executive function difficulties, behavior and emotional disorders, autism spectrum disorder, intellectual disabilities, learning disabilities, dyslexia, language and communication difficulties, physical and sensory disabilities, and more. With the bulk of educational psychology focused on "mainstream" or "typically developing" learners, relatively little educational psychology theory, research, measurement, or practice has attended to students with "special needs." As clearly demonstrated in this book, the factors and processes studied within educational psychology—motivation and engagement, cognition and neuroscience, social-emotional development, instruction, home and school environments, and more—are vital to all learners, especially those at risk or disabled. Integrating guidance from the DSM-5 by the American Psychiatric Association and the International Classification of Diseases (ICD-10) by the World Health Organization, this book synthesizes and builds on existing interdisciplinary research to establish a comprehensive case for effective psycho-educational theory, research, and practice that address learners with special needs. Twenty-seven chapters by experts in the field are structured into three parts on diverse special needs categories, perspectives from major educational psychology theories, and constructs relevant to special needs learning, development, and knowledge building.

Developmental and Educational Psychology for Teachers

An applied approach *Taylor & Francis*

Developmental and Educational Psychology for Teachers brings together a range of evidence drawn from psychology to answer a number of critical educational questions, from basic questions of readiness - for example, when is a child ready for school, through to more complex matters, such as how does a teacher understand and promote good peer relationships in their classroom? The answers to these and other questions discussed draw here on the interplay between a teachers’ craft expertise and their knowledge of evidence and theory from developmental and educational psychology. Presenting a range of classic theories and contemporary research to help readers understand what the key issues are for teachers and other professionals, this book aides informed educational decisions in situations such as: inclusion, ability grouping, sex differences, developing creativity, home and peer influences on learning, and developing effective learners. Teachers in early years, primary and secondary settings are routinely faced with questions regarding the development of children. This not only relates to the planning and delivery of lessons, but also to the mental and physical wellbeing of the children and adolescents that they teach. The pedagogical features of this book are accessible and clearly presented, including focus questions that direct the reader’s attention to key issues, activity posts that point the reader to meaningful and relevant research and show the practical applications of material covered, and extension material that gives depth to many of the topics covered. This book aims to inform the practice of both in-service and trainee teachers, addressing issues that are relevant to their practice. With no other detailed and accessible text presenting this evidence and theory specifically for an audience of practicing and trainee teachers currently on the market, this book will be of essential reading to practicing and trainee teachers for early years, primary and secondary education and other related educational contexts such as educational psychologists, counsellors, paediatric and child doctors and nurses.

Teaching on Assessment *IAP*

In an age where the quality of teacher education programs has been called into question, it is more important than ever that teachers have a fundamental understanding of the principles of human learning, motivation, and development. Theory to Practice: Educational Psychology for Teachers and Teaching is a series for those who teach educational psychology in teacher education programs. At a time when educational psychology is at risk of becoming marginalized, it is imperative that we, as educators, “walk our talk” in serving as models of what effective instruction looks like. Each volume in the series draws upon the latest research to help instructors model fundamental principles of learning, motivation, and development to best prepare their students for the diverse,

multidimensional, uncertain, and socially-embedded environments in which these future educators will teach. The inaugural volume, *Teaching on Assessment*, is centered on the role of assessment in teaching and learning. Each chapter translates current research on critical topics in assessment for educational psychology instructors and teacher educators to consider in their teaching of future teachers. Written for practitioners, the aim is to present contemporary issues and ideas that would help teachers engage in meaningful assessment practice. This volume is important not only because of the dwindling presence of assessment-related instructional content in teacher preparation programs, but also because the policy changes in the last two decades have transformed the meaning and use of assessment in K-12 classrooms. Praise for *Teaching on Assessment* "This thought-provoking book brings together perspectives from educational psychology and teacher education to examine how assessment can best support student motivation, engagement, and learning. In the volume, editors Nichols and Varier present a set of chapters written by leaders in the field to examine critical questions about how to best prepare teachers to make instructional decisions, understand assessment within the context of learning and motivation theory, and draw on assessment in ways which can meet the needs of diverse learners. Written in a highly accessible language and style, each chapter contains clear takeaway messages designed for educational psychologists, teacher educators, teachers, and pre-service teachers. This book is essential reading for anyone involved in teaching or developing our future teaching professionals." Lois R. Harris, Australian Catholic University "This impressive book provides a wealth of contemporary and engaging resources, ideas and perspectives that educational psychology instructors will find relevant for helping students understand the complexity of assessment decision-making as an essential component of instruction. Traditional assessment principles are integrated with contemporary educational psychology research that will enhance prospective teachers' decision-making about classroom assessments that promote all students' learning and motivation. It is unique in showing how to best leverage both formative and summative assessment to boost student engagement and achievement, enabling students to understand how to integrate practical classroom constraints and realities with current knowledge about self-regulation, intrinsic motivation, and other psychological constructs that assessment needs to consider. The chapters are written by established experts who are able to effectively balance presentation of research and theory with practical applications. Notably, the volume includes very important topics rarely emphasized in other assessment texts, including assessment literacy frameworks, diversity, equity, assessment strategies for students with special needs, and data-driven decision making. The book will be an excellent supplement for educational psychology classes or for assessment courses, introducing students to current thinking about how to effectively integrate assessment with instruction." James McMillan, Virginia Commonwealth University.

Handbook of Self-Regulation of Learning and Performance *Taylor & Francis*

Self-regulated learning (or self-regulation) refers to the process whereby learners personally activate and sustain cognitions, affects, and behaviours that are systematically oriented toward the attainment of learning goals. This is the first volume to integrate into a single volume all aspects of the field of self-regulation of learning and performance: basic domains, applications to content areas, instructional issues, methodological issues, and individual differences. It draws on research from such diverse areas as cognitive, educational, clinical, social, and organizational psychology. Distinguishing features include: Chapter Structure – To ensure uniformity and coherence across chapters, each chapter author addresses the theoretical ideas underlying their topic, research evidence bearing on these ideas, future research directions, and implications for educational practice. International – Because research on self-regulation is increasingly global, a significant number of international contributors are included (see table of contents). Readable – In order to make the book accessible to students, chapters have been carefully edited for clarity, conciseness, and organizational consistency. Expertise – All chapters are written by leading researchers from around the world who are highly regarded experts on their particular topics and are active contributors to the field.

The Psychology of Education *Routledge*

Written in an accessible and engaging style, this second edition of *The Psychology of Education* addresses key concepts from psychology which relate to education. Throughout the text the author team emphasise an evidence-based approach, providing practical suggestions to improve learning outcomes, while fictional case studies are used in this new edition to provide students with a sense of what psychological issues can look like in the classroom. Activities around these case studies give students the chance to think about how to apply their theoretical knowledge to these real-world contexts. 'Key implications' are drawn out at appropriate points, and throughout the book students are provided with strategies for interrogating evidence. Key terms are glossed throughout the book and chapters are summarised and followed by suggestions for further reading. A chapter on Learning interactions and social worlds is new to this edition. The following chapters have all been extensively updated: Learning Assessment Individual differences and achievement Student engagement and motivation The educational context Society and culture Language Literacy Inclusive education and special educational needs Behaviour problems Dealing with behaviour problems. This book is essential reading for undergraduate students of Education Studies and Psychology as well as trainee teachers on BA, BED and PGCE courses. It will also be of use to postgraduates training to be educational psychologists.

Multimedia Edition of Educational Psychology

Developing Learners *Prentice Hall*

This widely used book is known for its exceptionally clear and engaging writing, in-depth focus on learning, and extensive concrete applications. It concentrates on core concepts and principles, and gives users an in-depth understanding of the central ideas of educational psychology. Up-to-date information includes discussions on critical thinking, apprenticeships, guided participation, setting events, behavioral momentum, positive behavioral support, direct instruction, self-regulated learning, and lesson plans. For individuals interested in a teaching career or the field of educational psychology.

The Development of the High Ability Child

Psychological Perspectives on Giftedness *Routledge*

This valuable text will help readers to understand the physical, social, and cognitive development of high ability children. Written by experts in the fields of education and psychology, each chapter applies core principles of psychology to the development of gifted and talented children. Through the content, readers will be shown how these children are like all children as well as the ways in which their development is unique. Covering the psychology of learning and learners, personality differences, language and physical development, problem solving, and motivation of high ability children, this book provides readers with a strong foundation for supporting and developing advanced learners. The text also includes Field Notes and Eye for Diversity sections to enable readers to put into practice, and recognize, important issues being discussed. Throughout, the editors blend discussions of research with practical advice for individuals charged with nurturing children with advanced cognitive potential. It is an essential read for students, counsellors, administrators, therapists, and parents seeking to support high ability children and their needs.

Human Learning *Prentice Hall*

This highly respected, market-leading textbook on learning theories applied to education prepares pre-service teachers and other educators with a unique and meaningful learning experience. The sixth edition of *Human Learning* covers a broad-range of learning theories and key perspectives on learning related to education, including: behaviorist, cognitive, social cognitive, contextual, and developmental theories, always highlighting relationships between concepts. Additionally, the text details associationistic processes (e.g., classical and instrumental conditioning), and more complex and distinctly human processes (e.g. metacognition, self-regulated learning, critical thinking). Every chapter features key pedagogical concepts with specific applications to classroom practice, numerous concrete examples that illustrate key concepts, principles, and recommendations and dozens of proven examples help make the fundamentals of these theories comprehensible to students with little or no prior coursework in psychology. Significant updates to this textbook include: important updates to reflect the most current research and new theories in the field, expansion of the chapter on cognition and memory, re-organization of Piaget and Vygotsky content into two separate chapters, a core section on teaching critical thinking skills, and the discussion of technology-based instructed has been significantly revised and expanded in this edition.

Child Development and Education

Child Development and Education bridges the gap between theory and practice, showing those who teach and care for infants, children, and adolescents how to apply developmental research and theory to everyday practice. More so than any other text, *Child Development and Education* not only describes developmental phenomena--for infants through late adolescence--but also facilitates observations of and analyses of what children say, do, and create, ensuring that educators can make informed decisions that meet children's and adolescent's needs. New to the fifth edition is a sensitivity to the cultural and bioecological nature of development. New features of the text situate children and adolescents in the contexts of their upbringing and articulate the implications of these experiences for educators and other professionals. Illustrated is the diverse nature of development and how it is influenced by social, environmental, and cultural contexts. Also new to this edition is support for teacher licensure preparation. Teacher candidates are alerted to developmental concepts and theorists they need to know, and are provided practice test questions and case studies to review, demonstrating for them how to prepare for their licensure exam.

How People Learn

Brain, Mind, Experience, and School: Expanded Edition *National Academies Press*
First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

A Contemporary Approach *Longman Publishing Group*
Organized around the unique theme of "What teachers need to know," Borich and Tombari present clearly organized units on Developmental Learning, Instruction and Classroom Management, Assessment, and Diverse Learners. Features include two new chapters on cognitive and constructivist strategies of teaching and learning, and over 40 " Applying your Knowledge" boxes.

EdPsych Modules *SAGE Publications*
Now with SAGE Publications, Cheryl Cisero Durwin and Marla Reese-Weber’s EdPsych Modules uses an innovative implementation of case studies and a modular format to address the challenge of

effectively connecting theory and research to practice. Each module is a succinct, stand-alone topic that represents every subject found in traditional chapter texts and can be used in any order for maximum flexibility in organizing your course. Each of the book’s eight units of modules begins with a set of four case studies--early childhood, elementary, middle school, and secondary--and ends with “Assess” and “Reflect and Evaluate” questions and activities to encourage comprehension and application of the research and theories presented. The case approach and the extensive pedagogy that support it allows students to constantly see the applications of the theories and research that they are studying in the text.

Developing Learners Study Guide

Transforming the Workforce for Children Birth Through Age 8

A Unifying Foundation *National Academies Press*
Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Educational Psychology

Principles and Applications *Pearson College Division*

Geared specifically towards future teachers, this practical introduction recognizes that an understanding of how children learn and think, how they grow and develop, why they do what they do, and how they differ from one another has implications for effective classroom practice. Therefore rather than superficially explore every aspect of educational psychology, this text focuses on offering in-depth treatment of fundamenatl principles and theories that are of particular educational significance.

Education and New Technologies

Perils and Promises for Learners *Routledge*

When should children begin their digital diet? Does the use of new technology hinder or enhance children's literacy development? Do new technologies give children new abilities or undermine their skills and identities? Are learners safe in modern online educational spaces? Kieron Sheehy and Andrew Holliman have assembled expert contributors from around the world to discuss these questions and have divided the book into three parts: early engagement with new technologies: decisions, dangers and data new technology: supporting all learners or divisive tools global and cultural reflections on educational technology. Education and New Technologies focuses on aspects of education where the use of twenty-first-century technologies has been particularly controversial, contemplating the possible educational benefits alongside potential negative impacts on learners. Topics covered include: e-books and their influence on literacy skills games-based learning the impact of new technologies on abilities and disabilities learning analytics and the use of large-scale learner data cyberbullying intelligent technologies and the connected learner. A twenty-first-century book for twenty-first-century concerns, Education and New Technologies presents up-to-date research and clear, engaging insight about the relationship between technology and how we learn.

Teaching Creative Thinking

Developing learners who generate ideas and can think critically (Pedagogy for a Changing World series) *Crown House Publishing Ltd*

In Teaching Creative Thinking: Developing Learners Who Generate Ideas and Can Think Critically, Bill Lucas and Ellen Spencer define and demystify the essence of creative thinking, and offer action-oriented and research-informed suggestions as to how it can best be developed in learners. Where once it was enough to know and do things, young people now need more than subject knowledge in order to thrive: they need capabilities. Teaching Creative Thinking is the first title in the three-part Pedagogy for a Changing World series, founded upon Lucas and Spencer's philosophy of dispositional teaching a pedagogical approach which aims to cultivate in learners certain dispositions that evidence suggests are going to be valuable to them both at school and in later life. A key capability is creative thinking, and, in 2021, one of the guardians of global comparative

standards, PISA, is recognising its importance by making creative thinking the 'innovative assessment domain' to supplement their testing of 15-year-olds' core capabilities in English, maths and science. Creative thinkers are inquisitive, collaborative, imaginative, persistent and disciplined and schools which foster these habits of mind in learners need to be creative in engaging children and young people by embedding creativity into their everyday educational experiences. In this extensive enquiry into the nature and nurture of creative thinking, the authors explore the effectiveness of various pedagogical approaches including problem-based learning, growth mindset, playful experimentation and the classroom as a learning community and provide a wealth of tried-and-tested classroom strategies that will boost learners' critical and creative thinking skills. The book is structured in an easy-to-access format, combining a comprehensive listing of practical ideas to stimulate lesson planning with expert guidance on integrating them into your practice, followed by plenty of inventive suggestions as to how learners' progress can be assessed and tracked along the way by both the pupil and the teacher. The authors then go further to offer exemplars of success by presenting case studies of schools' innovations in adopting these approaches, and dedicate a chapter to dispelling any pressing doubts that teachers may have by exposing the potential pitfalls and offering advice on how to avoid them. Venturing beyond the classroom setting, Teaching Creative Thinking also delves into the ways in which a school can work towards the provision of co-curricular experiences such as partnering with a range of external community groups and better engage its leadership team and pupils' parents with the idea of creative thinking in order to support learners with opportunities to grow. The authors offer many examples which will inspire schools to do just this, and collate these ideas into building a framework for learning that equips young people in schools today with the twenty-first century skills and capabilities that will enable them to thrive in the workforce of tomorrow. Replete with research-led insight and ready-to-use strategies, Teaching Creative Thinking is a powerful call to action and a practical handbook for all teachers and leaders, in both primary and secondary settings, who want to embed a capabilities approach in their schools.

Language Education and Emotions

Research into Emotions and Language Learners, Language Teachers and Educational Processes *Routledge*

Language Education and Emotions presents innovative, empirical research into the influence of emotions and affective factors in language education, both in L1 and in foreign language education. It offers a comprehensive overview of studies authored and co-authored by researchers from all over the world. The volume opens and ends with "backbone" contributions by two of the discipline's most reputed scholars: Jane Arnold (Spain) and Jean-Marc Dewaele (United Kingdom). This book broadens our understanding of emotions, including well-known concepts such as foreign language anxiety as well as addressing the emotions that have only recently received scientific attention, driven by the positive psychology movement. Chapters explore emotions from the perspective of the language learner and the language teacher, and in relation to educational processes. A number of contributions deal with traditional, school-based contexts, whereas others study new settings of foreign language education such as migration. The book paints a picture of the broad scale of approaches used to study this topic and offers new and relevant insights for the field of language education and emotions. This book will be of great interest to academics, researchers and postgraduate students in the field of language education, psycholinguistics, sociolinguistics, and applied linguistics.
