Responsive Web Design Overview For

In Responsive Web Design, the layout of the page adapts depending on the screen size and orientation of the device where it's viewed. Elements are reorganized as viewports grow or shrink. Using flexible grids, the content automatically adjusts to multiple displays and devices. A design for desktop might use three columns for its layout, and then be reorganized to use two columns for tablets, and a single column for phones.

Responsive Web Design Overview & Key Concepts

It is important to understand that responsive web design isn't a separate technology — it is a term used to describe an approach to web design or a set of best practices, used to create a layout that can respond to the device being used to view the content. In Marcotte's original exploration this meant flexible grids (using floats) and media queries, however in the almost 10 years since that article was written, working responsively has become the default.

Responsive design - Learn web development | MDN

A responsive web design will automatically adjust for different screen sizes and viewports. What is Responsive Web Design? Responsive Web Design is about using HTML and CSS to automatically resize, hide, shrink, or enlarge, a website, to make it look good on all devices (desktops, tablets, and phones):

HTML Responsive Web Design - W3Schools

Responsive web design, originally defined by Ethan Marcotte in A List Apart, responds to the needs of the users and the devices they're using. The layout changes based on the size and capabilities of the device.
