A temperature mapping exercise is required for any space allocated for the storage and handling of products with a specified labelled storage temperature. This includes freezer rooms, cold rooms, temperature-controlled storage areas, quarantine areas and receiving and loading bays. It may also include laboratories.

The purpose of a temperature mapping study is to document and control the temperature distribution within a storage area. This document describes how to carry out a systematic mapping procedure in any cold room, freezer room or other temperature-controlled store.

A temperature-mapping exercise is required for any space allocated for the storage and handling of products with a specified labelled storage temperature. This includes freezer rooms, cold rooms, temperature-controlled storage areas, quarantine areas and receiving and loading bays. It may also include laboratories.

Temperature mapping is the study of temperature distribution within a temperature-controlled environment, such as industrial fridges, cool rooms, warehouses and receiving/loading bays. The mapping study identifies possible cold spots (or hot spots) and helps determine whether or not remedial actions are required.

With suitable adjustments or options to cover the full range of temperature regimes, a standard protocol can be used to map any storage area in the facility. 3.2. The mapping protocol should contain the following sections: Approval page and change control history.

Temperature mapping utilizes sensors and data loggers which identifies and detects whether a storage area maintains its temperature within its pre-defined limits. The procedure must be able to explain the temperature profile across the storage area under both empty and loaded conditions.

So for maintaining proper storing conditions (temperature, humidity and light) mapping of areas is necessary. Mapping of these areas is important for maintaining stability as temperature and humidity plays crucial role in degradation.

Temperature Mapping is performed to determine if a storage area can maintain temperature within defined limits (Fridges, Freezers, Rooms, Warehouses and Incubators etc.). Sensors are distributed throughout the unit/room in pre-defined locations to confirm it performs within pre-defined set points.

A mapping exercise of the proposed storage area will ensure that the company will understand their storage area and identify any potential areas therein that may be unsuitable to store medicines. A...

Temperature mapping shall be performed in control rooms for find out the hot and cold location for fixing the hygrometer for routine environment monitoring. Temperature mapping should be done at three levels or at one level (in a zig zag manner) covering complete area at all storage area of materials and products.

The purpose of temperature mapping is to determine if the storage area can maintain temperature within defined limits to demonstrate that it is suitable for the storage of temperature sensitive products. Climatic conditions, air flow, footfall, load, machinery operation and door openings all have an effect on the areas temperature variation.

Temperature Mapping of Storage Areas is required in both Summer and Winter conditions, and here's why. Air-Conditioning Systems:. Systems cope differently in Summer v Winter. A system may be more effective in Winter as... Hot v Cold Spots:. Throughout Summer, the product can be exposed in areas ...

The requirement itself is defined in the GDP Guidelines Chapter 3.2.1: "An initial temperature mapping exercise should be carried out on the storage area before use, under representative conditions." The results of this mapping should be used to place monitoring devices at areas that experience the most temperature differences and the hot and cold spots.

Heat distribution and temperature mapping studies of large stores and warehouses requires sensors to be fitted strategically throughout the storage shelving, covering a percentage of the shelving area horizontally and vertically.

Temperature mapping of your warehouse or storage area can be time consuming work, but PharmOut offers practical solutions to simplify the validation process in five steps to ensure that it is cost effective for your business while maintaining the highest standards of quality and reliability.

Temperature mapping is the process of determining the temperature profile of a particular temperature-controlled environment or process such as a freezer, refrigerator, incubator, stability chamber, warehouse or autoclave by measuring multiple points in a defined area over a specified study duration.

• A temperature mapping exercise is required for any space allocated for the storage and handling of products with a specified labelled storage temperature. This includes freezer rooms, cold rooms, temperature- controlled storage areas, quarantine areas and receiving and loading bays. It may also
