The graph indicates that the levels of nitrate in the eco-column increases over the period of the lab. Justification: If you refer to the slope of the best fit line on the graph for the nitrate levels in the eco-column, the slope is 0.08. This is a positive slope which means that there is an increase in the nitrate in the eco-column. Explanation

Eco-Column Lab - Environmental Science

The Aquatic Zone consisted of three guppies, a type of water plant called elodea, and water. The guppies urinate, creating NH_3 , which with the help of bacteria will become NO_3 , and the NO_3 will be used by the plants as food. Along with the nitrogen cycle, the guppies help in the carbon cycle by breathing and excreting, which is absorbed by the elodea to produce glucose.

Ms Kerrigan's Virtual Classroom - Test Corrections

For the ecocolumn lab each group had to create an ecosystem that included an aquatic region, terrestrial region, and a decomposition region. The ecocolumn had to be tested for temperature, nitrogen, dissolved oxygen, and pH levels. Each week we recorded these levels so we could compare them. The column was constructed with different sized bottles.
