These can help push highly excited shells into full statistical equilibrium, with number densities for atoms in a given n level proportional to the appropriate statistical weight, that is, $N_n = (2l + 1)N \frac{g_n}{g}$, where N is the total number density of H atoms with an electron in the n th shell. 4 This affects

the flow of electrons toward lower levels and hence the recombination dynamics as well as the associated spectral distortions.

Statistical Equilibrium - an overview | ScienceDirect Topics

Equilibrium Statistical Mechanics Results in Various Limits. All of these results come from doing the appropriate integral over $\left(\frac{1}{(k_B T)^3} \int \frac{d^3p}{(2\pi)^3} \exp\left[-\beta \left(\frac{p^2}{2m} + \mu \right) \right] \right)^{-1}$. We will refer back to these later. In the relativistic $(k_B T \gg mc^2)$ and $(k_B T \gg \mu)$ limit for bosons

the Liouville equation is a central

problem in statistical mechanics (topic of ergodic theory). Nevertheless: the thermal equilibrium is described by a stationary (time-independent) probability density: $\partial \rho / \partial t = 0 \Rightarrow L\rho = 0 \Rightarrow \{H, \rho\} = 0$. A stationary ρ is an eigenfunction of L with eigenvalue zero. If $\rho = \rho(H)$ then $\{H, \rho\} = 0$.

09. Microcanonical Ensemble

Statistical equilibrium occurs if, for each state in the ensemble, the ensemble also contains all of its future and past states with probabilities equal to the probability of being in that state. The study of equilibrium ensembles of isolated systems is the focus of statistical thermodynamics. Non-equilibrium statistical mechanics addresses the more general case of ensembles that

change over time, and/or ensembles of non-isolated systems.

Statistical mechanics - Wikipedia

Statistical physics sets out to explain how the patterns and structures around us in the macroscopic world arise from the interactions between their component parts. A major challenge in the 21st century is to extend statistical physics to systems that are far from equilibrium.

Equilibrium statistical mechanics is (amongst other things) about deriving the equations of state of thermodynamic

systems (in equilibrium) from a microscopic basis (i.e. starting with a microscopic Hamiltonian). In order to do that, we observe the system over a very long time, which means taking the limit of time average and variance of a phase space function.
