Practice of Intramedullary Locked Nails - K S Leung, G ...

According to the text, intramedullary nails acts as stress-shielding instruments when locked statically; and acts as a stress-sharing instrument when it is not locked. Unlocked nails also act as an internal splint while the fracture heals . When the nail is stress shielding, fracture healing is primary (with no callus), unless the nail is not well fixed, in which case fracture healing is secondary. When the nail is stress shearing, fracture healing is secondary (with callus) .

Presentation of a Humeral Shaft Fracture Treated by Locked ...

Intramedullary nails have become the main treatment for intertrochanteric fractures. However, a distal locking procedure during nailing gradually raised controversy. In this study, a systematic review and meta-analysis of clinical trials was performed to summarize existing evidence, aiming to determine the safety and efficacy of distal locking or unlocking in the nailing of stable intertrochanteric fractures.
