A colloid is intermediate between a

solution and a suspension. While a suspension will separate out a colloid will not. Colloids can be distinguished from solutions using the Tyndall effect. Light passing through a colloidal dispersion, such as smoky or foggy air, will be reflected by the larger particles and the light beam will be visible.

colloids. A. solution. is a homogeneous mixture of two or more substances, a. suspension. is a heterogeneous mixture containing particles that will settle out of solution, and a. colloid. is a heterogeneous mixture that contains particles that do not settle out of solution. Many.

Classifying Mixtures

make a solution. colloid: a mixture containing particles larger than the solute but small enough to remain suspended in the continuous phase of another component. This is also called a colloidal dispersion. Tyndall Effect: the scattering of a light beam as it passes through a colloid. suspension: heterogeneous mixture that contains

fine solid

Activity 3 Solutions, Suspensions, and Colloids

The particles in a solution affect the colligative properties of the solution, while the particles in a colloid or suspension have no effect on colligative properties. Solutions do not exhibit the Tyndall Effect, while colloids and suspensions do. The Tyndall Effect describes the scattering effect of dispersed particles on a beam of light. Particles in solution are too small relative to the wavelength of the light to cause scattering, but the particles in colloids and suspensions are large ...
