 introvector-2009-1 A vector is a quantity
 that has both a magnitude (or size) and
 a direction. Both of these properties
 must be given in order to specify a
 vector completely. In this unit we
 describe how to write down vectors, how
 to add and subtract them, and how to
 use them in geometry.

Some notation for vectors What does it
 mean if, for two vectors, $a = b$? This
 means first that the length of a equals
 the length of b , so that the two vectors
 have the same magnitude. But it also
 means that a and b are in the same
 direction. How can we write this down
 more succinctly? If two vectors are “in
 the same direction”, then they are
 parallel.
