Digital Signal Processing | MIT OpenCourseWare

Digital signal processing is the use of digital processing, such as by computers or more specialized digital signal processors, to perform a wide variety of signal processing operations. The digital signals processed in this manner are a sequence of numbers that represent samples of a continuous variable in a domain such as time, space, or frequency. In digital

electronics, a digital signal is represented as a pulse train, which is typically generated by the switching of a transistor. Digital si
