Solving Parallel Circuit Problems Answers

The equation for calculating total resistance in a parallel circuit (for any number of parallel resistances) is sometimes written like this: $R_{total} = (R_1^{-1} + R_2^{-1} + \dots R_n^{-1})^{-1}$ Re-write this equation in such a way that it no longer contains any exponents.

Parallel DC Circuits Practice Worksheet With Answers ...

To solve parallel circuits, you'll need to know that parallel circuits have two or more branches that all lead from point A to point B. If you want to solve for total current, use the equation $I_T = I_1 + I_2 + I_3$ where I_T is the total current, and I_1 through I_3 are the currents in each branch.
