LYOPHOBIC COLLOIDS Colloidal solutions in which the dispersed phase has no affinity to the dispersion medium. These are also referred as extrinsic colloids. Such substances have no tendency to pass into colloidal solution when brought in contact with dispersion medium. The lyophobic colloids are relatively unstable. They are irreversible by nature and are stabilized by adding small amount of electrolyte. They are poorly hydrated. If the dispersion medium is water, the lyophobic colloids are ...

Physical Properties of Colloidal Solutions. Stability: Colloids are relatively stable in nature. The particles of the dispersed phase are in a state of continuous motion and remain suspended in the solution. Filterability: Colloids require specialized filters known as ultrafilters for filtration. They readily pass through ordinary filter papers without yielding any residue.

Properties of Colloidal Solutions: Physical, Optical ...

Colloids (also known as colloidal solutions or colloidal systems) are mixtures in which microscopically dispersed insoluble particles of one substance are suspended in another substance. The size of the suspended particles in a colloid can range from 1 to 1000 nanometres (10-9 metres).

Colloids - Definition, Properties, Types, Examples, Notes

Solutions exhibit completely different behavior from suspensions. A solution may be colored, but it is transparent, the molecules or ions are invisible, and they do not settle out on standing. A group of mixtures called colloids (or colloidal dispersions) exhibit properties intermediate between those of suspensions and solutions . The particles in a colloid are larger than most simple molecules; however, colloidal particles are small enough that they do not settle out upon standing.

Chapter 10 Colloids and Colloidal Stability

A colloid is a mixture in which one substance which has fine particles (dispersed phase) mixed into another substance (dispersion medium). The particles of the colloids have a range from 1 to 1000 nm in diameter. The solution is called colloidal dispersion because the particles of solutions do not mix or settle down.

Classification of Colloids - Definition, Types, Examples ...

Classification. Because the size of the dispersed phase may be difficult to measure, and because colloids have the appearance of solutions, colloids are sometimes identified and characterized by their physico-chemical and transport properties.For example, if a colloid consists of a solid phase dispersed in a liquid, the solid particles will not diffuse through a membrane, whereas with a true ...
