Another mechanism for evolution is genetic drift, which can occur when a small group of individuals leaves a population and establishes a new one in a geographically isolated region. For example, when a small population of fish is placed in a lake, the fish population will evolve into one that is different from the original.

Mechanisms of Evolution - CliffsNotes

Another mechanism of evolution is gene flow (also called migration). Gene flow is any movement of individuals, and/or the genetic material they carry, from one population to another (migration). A population is all the organisms of the same species, which live in a particular geographical area, and have the capability of interbreeding.
