Access to Chemistry *Royal Society of Chemistry*

This text has been specifically designed to prepare people with previously limited chemical knowledge for entrance into science related courses (such as Foundation and Access courses) which involve chemistry, in higher education. Until now there have been no texts available for use on these courses and this book fills that gap. Access to Chemistry effectively forms a self-study course, which is split into separate modules and units covering the full spread of concepts required for those needing a basic knowledge of chemistry. The material is presented in a friendly

and easy-to-use manner which allows the student to pace their acquisition of knowledge and gain increasing confidence in order to succeed in understanding essential relevant concepts. Other useful features of this book include starter diagnostic tests, worked examples and self study tests (with answers) at the end of each unit. In addition to Access or Foundation course students and their tutors, to whom this book will prove essential, it will have an appeal also as a revision text for those needing a 'refresher' after a break in the subject. In addition, it will be of interest to members of the general public who wish to better educate themselves on chemical matters, as it provides a clear and useful insight into areas such as health, home chemicals, business

market trends and gardening.

Psychology In Modules (Spiral) *Macmillan*

Why Myers? David Myers has become the world's best-selling introductory psychology author by serving the needs of instructors and students so well. Each Myers textbook offers an impeccable combination of up-to-date research, well-crafted pedagogy, and effective media and supplements. Most of all, each Myers text demonstrates why this author's style works so well for students, with his signature compassionate,

companionable voice, and superb judgment about how to communicate the science of psychology and its human impact. Why Modules? This modules-based version of Myers' best-selling, full-length text, *Psychology* (breaking down that book's 16 chapters into 59 short modules) is yet another example of the author's ability to understand what works in the classroom. It comes from Myers' experiences with students who strongly prefer textbooks divided into briefer segments instead of lengthier chapters, and with instructors who appreciate the flexibility offered by the modular format. Modular organization presents material in smaller segments. Students can easily read any module in a single sitting. Self-standing modules. Instructors can assign modules in their

own preferred order. The modules make no assumptions about what students have previously read. Illustrations and key terms are repeated as needed. This modular organization of short, stand-alone text units enhances teacher flexibility. Instead of assigning the entire Sensation and Perception chapter, instructors can assign the module on vision, the module on hearing, and/or the module on the other senses in whatever order they choose.
