Tip-Edge is a single wing bracket that does not lose its rotational control. The base is every bit as
 wide as a twin bracket. The Tip-Edge technique allows you to utilize the maximum prescription built
 into the bracket for finishing, i.e., 100% bracket expression. No other system can achieve that.

The Tip-Edge® System | Mid Continent Orthodontics

The prototype Tip-Edge brackets were therefore derived from a single .022 inch straight-wire
 bracket merely by cutting away two diametrically opposed corners from the archwire slot . 1 This
 resulted in a bracket that enabled the crown to tip in a predetermined direction, whereas with an
 archwire of full vertical thickness, it would resist tipping in the reverse direction. This was a logical
 design, since the desired direction of tipping, in routine orthodontic cases, is easy to predict.

Tip-Edge orthodontics is a minimally invasive, esthetic approach to straightening the smile. Many
 Cape Coral, FL, patients find Tip-Edge orthodontics ideal for opening or closing the bite and
 correcting crooked teeth, crowding and other oral concerns. Tip-Edge orthodontics differ from
 traditional braces in that the system tips the teeth to their desired position and then uprights the
 root, as opposed to dredging teeth through the bone.

Anchorage mode • Tip-Edge appliance has the capability of combining advantages of both Begg and
 Straight wire concepts • Variable anchorage with Class II traction was demonstrated by Dr. Begg •
 Works effectively in Class II- difficult deep bites, (elastics preferred over headgear) • Side effects eg
 clockwise rotation of occlusal plane, opening of mandibular angle, & elongation of upper incisors
 avoided by use of light forces

Tip edge appliance - SlideShare

TIP EDGE • Dr. Peter Kesling (the inventor of tip-edge), combined the tipping
 ability of the Begg technique with the control of Straight wire. • Began with a straight edge bracket
 and removed two wedges in the slot, which allows the tooth to tip up to 25 degrees.
