Wildcard Pattern Matching - GeeksforGeeks

In computer science, string-searching algorithms, sometimes called string-matching algorithms, are an important class of string algorithms that try to find a place where one or several strings are found within a larger string or text. A basic example of string searching is when the pattern and the searched text are arrays of elements of an alphabet Σ . Σ may be a human language alphabet, for example, the letters A through Z and other applications may use a binary

alphabet or a DNA alphabet ...
