Electronic System Level Design An

Electronic system level design and verification is an electronic design methodology, focused on higher abstraction level concerns. The term Electronic System Level or ESL Design was first defined by Gartner Dataquest, an EDA-industry-analysis firm, on February 1, 2001. It is defined in ESL

Design and Verification as: "the utilization of appropriate abstractions in order to increase comprehension about a system, and to enhance the probability of a successful implementation of functionality in a c

Electronic System Level Design - An Open-Source Approach ...

With the increasing complexities of digital systems to be created today, particularly for applications such as communications, there is a need to enable the designer to work at higher levels of design abstraction and away from the detailed design aspects. Designing at such high levels is referred to as electronic system-level (ESL) design [14, 15]. ESL design is an emerging area for the design community and is a response to the emerging needs of the designers (both hardware and software) to ...
