AJCC Cancer Staging Atlas

A Companion to the Seventh Editions of the AJCC Cancer Staging Manual and Handbook *Springer Science & Business Media*

Significantly expanded, expertly and beautifully illustrated, The AJCC Cancer Staging Atlas, 2nd Edition, offers more than 600 illustrations created exclusively for this new edition and is fully updated to reflect the concepts discussed in the 7th Edition of both the AJCC Cancer Staging Manual and its

companion Handbook. This Atlas illustrates the TNM classifications of all cancer sites and types included in the 7th Edition of the Manual and visually conceptualizes the TNM classifications and stage groupings. Specifically designed for simplicity and precision, the drawings have been verified through multi-disciplinary review to ensure accuracy and relevancy for clinical use. Every illustration provides detailed anatomic depictions to clarify critical structures and to allow the reader to instantly visualize the progressive extent of malignant disease. In addition, nodal maps are included for each site, appropriate labeling has been incorporated to identify

significant anatomic structures, and each illustration is accompanied by an explanatory legend. The AJCC Cancer Staging Atlas, 2nd Edition, is an official publication of the American Joint Committee on Cancer, the recognized international leader in state-of-the-art information on cancer staging. This Atlas has been created as a companion to the updated 7th Edition of the AJCC Cancer Staging Manual, which continues to disseminate the importance of anatomical and pathological staging in the management of cancer. This state-of-the-art, invaluable 2nd Edition includes a CD containing PowerPoint slides of all

illustrations, additional color, and a user-friendly, easy-to-read layout. The AJCC Cancer Staging Atlas, 2nd Edition will serve as an indispensable reference for clinicians, registrars, students, trainees, and patients.

AJCC Cancer Staging Manual *Springer Science & Business Media*

The American Joint Committee on Cancer's Cancer Staging Manual is used by physicians throughout the world to diagnose cancer and determine the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union

Against Cancer). In addition to the information found in the Handbook, the Manual provides standardized data forms for each anatomic site, which can be utilized as permanent patient records, enabling clinicians and cancer research scientists to maintain consistency in evaluating the efficacy of diagnosis and treatment. The CD-ROM packaged with each Manual contains printable copies of each of the book's 45 Staging Forms.

AJCC Cancer Staging Handbook

From the AJCC Cancer Staging Manual *Springer*

Used by physicians and health care professionals

worldwide to facilitate the uniform description of neoplastic diseases, the fully revised and updated Seventh Edition of the AJCC Cancer Staging Handbook brings together all currently available information on staging of cancer at various anatomic sites and incorporates newly acquired knowledge on the etiology and pathology of cancer.

Imaging in Clinical Oncology *Springer*

This is the second edition of a well-received book reflecting the state of the art in oncologic imaging research and promoting mutual understanding and collaboration between radiologists and clinical oncologists. It presents all currently available imaging modalities and

covers a broad spectrum of oncologic diseases for most organ systems. Today, oncologic imaging faces the challenge of improving and refining concepts for precise tumor delineation and biologic/functional tumor characterization, as well as for purposes of creating individual treatment plans. The concept of radiomics has further advanced the conversion of images into mineable data and subsequent analysis of said data for decision-making support. Since the release of the book's first edition, radiomics has been introduced in oncology studies and can be performed with tomographic images from CT, MRI and PET/CT studies. The combination of radiomic data with

genomic features is known as radiogenomics, and can potentially offer additional decision-making support. This book will be of interest to clinical oncologists with regard to the diagnosis, staging, treatment and follow-up on various tumors affecting the CNS, chest, abdomen, urogenital and musculoskeletal systems.

TNM-Atlas

Illustrated Guide to the TNM/pTNM-Classification of Malignant Tumours

Springer Science & Business Media

Confronted with a myriad of T's, N's and M's in the VICC TNM

booklet, classifying a malignancy may seem to many cancer clinicians a tedious, dull and pedantic task. But at a closer look at the TNM Atlas all of a sudden lifeless categories become vivid images, challenging the clinician's know-how and investigational skills. Brigit van der Werf-Messing, M.D. Professor of Radiology Past Chairman of the International TNM-Committee of the VICC Rotterdam, July 1982

Preface In 1938 the League of Nations Health Organization published an Atlas Illustrating the Division of Cancer of the Uterine Cervix into Four Stages (J. Heyman, ed., Stockholm). Since this work appeared, the idea of visual representation of the anatomical extent of malignant tumours at the different stages of their development has been repeatedly discussed. At its meeting in Copenhagen in July 1954, the DICC adopted as part of its programme "the realization of a clinical atlas". However, the time to do the planned book of illustrations was not ripe until the national committees and international organizations had officially recognized the 28 classifications of malignant tumours at various sites as presented in the third edition of the TNM Booklet edited by M. Harmer (TNM Classification of Malignant Tumours, 1978). This was all the more important since publi

cation of the Booklet was followed in 1980 by publication of a Brochure of Checklists, edited by A.H.

Handbook of Evidence-Based Radiation Oncology
Springer Science & Business Media

Building on the success of this book's first edition, Dr. Eric Hansen and Dr. Mack Roach have updated, revised, and expanded the Handbook of Evidence-based Radiation Oncology, a portable reference that utilizes evidence-based medicine as the basis for practical treatment recommendations and guidelines. Organized by body site, concise clinical chapters provide easy access to critical information. Important "pearls" of epidemiology,

anatomy, pathology, and clinical presentation are highlighted. Key facets of the work-up are listed, followed by staging and/or risk classification systems. Treatment recommendations are discussed based on stage, histology, and/or risk classification. Brief summaries of key trials and studies provide rationale for the recommendations. Practical guidelines for radiation techniques are described. Finally, complications and follow-up guidelines are outlined. Updates from the first edition include brand new color figures and color contouring mini-atlases for head and neck, gastrointestinal, prostate, and gynecological tumors; redesigned tables for

increased readability; new chapters on management of the neck and unknown primary, clinical radiobiology, and pediatric malignancies and benign conditions; and new appendices including the American College of Radiology guidelines for administration of IV contrast.

TNM Supplement

A Commentary on Uniform Use *John Wiley & Sons*

The Union for International Cancer Controls (UICC) TNM classification system is the most widely used cancer classification and staging system in the world. It is used to describe the anatomical extent of disease and it is essential to patient

care, research and cancer control. This fifth edition of the TNM Supplement: A Commentary on Uniform Use offers practitioners a wealth of material intended to complement the systems day-to-day use. The volume features: Updated definitions of terms used in cancer staging. New sections on carcinomas of the thymus, sarcomas of the spine and pelvis and soft tissue sarcomas of the head and neck, and comprehensive updates to the head and neck carcinomas, carcinomas of the lung and neuroendocrine tumours sections. Frequently asked questions from the UICC helpdesk. The Supplement may be treated as a

companion text to the recent eighth edition of the TNM Classification of Malignant Tumours (978-1-119-26357-9), supporting the correct and uniform application of the TNM classification system. The TNM Supplement can also be utilised as a standalone book, providing explanations and examples to answer many questions that arise during the daily use of the TNM cancer classification and staging system, particularly in unusual cases.

AJCC Cancer Staging Manual *Springer*

The AJCC Cancer Staging Manual is used by physicians and health care professionals throughout the world to facilitate the uniform

description and reporting of neoplastic diseases. Proper classification and staging of cancer is essential for the physician to assign proper treatment, evaluate results of management and clinical trials, and to serve as the standard for local, regional and international reporting on cancer incidence and outcome. Significantly expanded and developed by international disease site expert panels, the Eighth Edition AJCC Cancer Staging Manual brings together all the currently available knowledge on staging of cancer at various anatomic sites. In this edition, evidence-based TNM staging is supplemented, as appropriate, by selected molecular

markers and newly acquired insights into the molecular underpinnings of cancer. This edition features 12 entirely new staging systems, a wide range of changed or new staging definitions, and a refined emphasis on a personalized-medicine approach. To enhance the print and electronic usability of the cancer staging forms, they are now available exclusively for access and downloading at www.cancerstaging.org. The Eighth Edition AJCC Cancer Staging Manual remains the gold standard reference for oncologists, surgeons, pathologists, radiologists, cancer registrars and medical professionals worldwide to ensure that all those caring for cancer

patients are fully versed in the language of cancer staging.

Adenocarcinoma of the Esophagogastric Junction

From Barrett's Esophagus to Cancer *Springer*

This book offers up-to-date and comprehensive coverage of the diagnosis and therapy of adenocarcinoma of the esophagogastric junction (EGJ). As is appropriate in the era of multidisciplinary and multimodal treatment, the contributions of all the various specialists involved cooperatively in the treatment of EGJ cancer are thoroughly described. Detailed attention is also paid to the significance of preneoplastic lesions, such as Barrett

esophagus. The final part of the book represents a surgical atlas documenting the techniques used in the EGJ region, with superb color images and stepwise description of procedures. Against the background of the rapidly increasing incidence in EGJ cancer, especially evident in Western countries, there is a need for greater uniformity in management strategies, which currently vary significantly across the world. This book provides appropriate guidance that will assist all practitioners involved in the diagnosis and treatment of EGJ cancers, including surgeons, oncologists, and radiotherapists.

Carcinoma of the Colon and Rectum
Mosby Elsevier Health Science

SEER Summary Staging Manual 2000

Codes and Coding Instructions

From the Surveill., Epidem., & End Results (SEER) Prog. based at the Nat. Cancer Inst. Intended as a coding manual beginning with cases diagnosed from Jan. 1, 2001 rather than a staging guide. Each anatomic site in the Topography Sect. of the Internat. Class. of Disease for Oncology -- 3rd Ed. (ICD-0-3) has a corresponding summary staging scheme. Certain specific histologic types also have specific staging

schemes. In some cases, sites which previously had separate guides (such as the segments of the colon) have a single staging scheme (colon), whereas some sites which previously had a single guide (e.g., larynx) have separate schemes for each sub-site of the larynx.

Quick Breads

The author tells you how to make a variety of quick breads using fresh herbs, spices, seeds, nuts, fresh fruit and vegetables for texture and taste. With no excess sugar and fat, these breads are healthy as well as good to eat.

AJCC Cancer Staging Atlas

AJCC Cancer Staging

Illustrations in PowerPoint® from the AJCC Cancer Staging Atlas *Springer Verlag*

In the model of the popular AJCC Staging manual and AJCC Staging handbook with the EZTNM module, this new product combines the AJCC Staging Atlas with a CD containing all the illustrations from the Atlas. Having the figures from the Atlas available as PowerPoint® slides means that users can document the "why" and "how" of their staging decisions. Users can also import figures into presentations for tumor boards, grand rounds, presentations, and journal articles/book chapters.

Radioguided Surgery

Springer Science & Business Media

This multidisciplinary textbook is designed to be the standard on the subject and is geared for use by physicians who are involved in the care and/or diagnosis of cancer patients. Comprehensive coverage is provided on all aspects of radioguided surgery. Practical information is readily accessible and throughout there is an emphasis on improved decision making. Tables present the indications, performance, and interpretation of procedures at a glance. A wealth of illustrations, including a full-color insert, enhances the application of new concepts.

Prognostic Factors

in Cancer Springer Science & Business Media

M. K. Gospodarowicz, P. Hermanek, and D. E. Henson Attention to innovations in cancer treatment has tended to eclipse the importance of prognostic assessment. However, the recognition that prognostic factors often have a greater impact on outcome than available therapies and the proliferation of biochemical, molecular, and genetic markers have resulted in renewed interest in this field. The outcome in patients with cancer is determined by a combination of numerous factors. Presently, the most widely recognized are the extent of disease, histologic type of

tumor, and treatment. It has been known for some time that additional factors also influence outcome. These include histologic grade, lymphatic or vascular invasion, mitotic index, performance status, symptoms, and most recently genetic and biochemical markers. It is the aim of this volume to compile those prognostic factors that have emerged as important determinants of outcome for tumors at various sites. This compilation represents the first phase of a more extensive process to integrate all prognostic factors in cancer to further enhance the prediction of outcome following treatment. Certain issues surrounding the assessment and

reporting of prognostic factors are also considered. Importance of Prognostic Factors Prognostic factors in cancer often have an immense influence on outcome, while treatment often has a much weaker effect. For example, the influence of the presence of lymph node involvement on survival of patients with metastatic breast cancer is much greater than the effect of adjuvant treatment with tamoxifen in the same group of patients [5].

Human Papillomavirus (HPV)-Associated Oropharyngeal Cancer *Springer*

Head and neck squamous cell carcinoma (HNSCC), the sixth most

prevalent cancer worldwide, remains a very difficult disease to treat and cure despite intensive investigation into molecular etiologies and tumor progression pathways. Due to public health efforts encouraging smoking cessation, the overall incidence of HNSCC has decreased in recent years in many countries. In contrast, the incidence of oropharyngeal squamous cell carcinoma (OPSCC) has increased significantly, and this subtype of HNSCC is commonly associated with human papillomavirus (HPV) infection. Moreover, individuals with HPV-positive OPSCC are generally younger and are frequently non-smokers, suggesting that HPV-associated OPSCC represents a distinct biologic entity. This volume summarizes the spectrum of current HPV-associated OPSCC research from the fundamental basic science to translational surgery and treatment approaches. Chapters are contributed by authoritative leaders in the fields of research and clinical care. Initial chapters address epidemiology, behavioral correlates of HPV infection, and racial disparities in oropharyngeal cancer. This is followed by chapters detailing HPV virology with focus on viral transformation, viral replication, and host response to viral infection. The molecular biology of HPV-associated OPSCC is investigated in chapters detailing alterations in signaling

networks and unique mutational profiles of human tumors. Clinical presentation, surgical perspectives, and treatment paradigms specific to HPV-associated OPSCC conclude the volume. This comprehensive volume provides an up-to-date overview of both scientific discovery and clinical management of this emerging public health problem.

AJCC Cancer Staging Handbook

TNM Classification of Malignant Tumors

Springer Science & Business Media

The American Joint Committee on Cancer's Cancer Staging Handbook is used by physicians throughout the world to diagnose cancer and determine

the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union Against Cancer). Organised by disease site into 48 comprehensive chapters, this new edition has completely revised and updated the old classification system to provide a new, evidence-based guide to cancer staging. This new TNM Classification will be implemented world-wide on January 1st, 2003.

Surgical and Interventional Ultrasound
McGraw Hill Professional

All the guidance you

need to enhance your understanding and clinical application of ultrasound. Includes DVD with video of key techniques. Surgical and Interventional Ultrasound offers a thorough survey of image-guided treatments in the OR, in the endoscopy suite, and at the bedside. This one-stop clinical companion spans virtually every kind of surgical and interventional specialty that utilizes ultrasound and delivers high-yield perspectives on using these techniques to ensure accurate clinical decision making. FEATURES: An all-in-one primer for ultrasound--packed with valuable how-to's and insights that take you through the basic exam and the full scope of interventions

Essential content for residents that supplements training in surgery residency programs--from the Focused Assessment with Sonography for Trauma (FAST) exam, to intraoperative ultrasound and ultrasound-guided procedures such as breast biopsy or radiofrequency ablation. Up-to-date, multidisciplinary focus on surgical and interventional ultrasound covers the array of procedures for which ultrasound is increasingly utilized. Full-color illustrations with hundreds of ultrasound images. Valuable opening chapter on the physics of ultrasound, which enables better quality images and a better understanding of image interpretation.

Important chapter on advanced technologies highlights 3D ultrasound imaging and contrast ultrasound, drawing attention to their safe and effective implementation in surgical practice. Emphasis on ultrasound-guided anesthesia explains how ultrasound can enhance the precision of regional anesthetic procedures. Instructive companion DVD features clips of key diagnostic and interventional techniques.

WHO Classification of Tumours of the Digestive System

WHO Classification of Tumours, Volume 3 *International Agency for Research on Cancer*
"The WHO

Classification of Tumours of the Digestive System presented in this book reflects the views of a Working Group that convened for an Editorial and Consensus Conference at the International Agency for Research on Cancer (IARC), Lyon, December 10-12, 2009"--P. [5].

Bone and Soft Tissue Pathology
Elsevier Health Sciences

Today's most essential bone and soft tissue pathology know-how in a compact, high-yield format. The book is pragmatic and well-organized, and the Expert Consult provides online access to full text and download-ready illustrations.

Urological Pathology

Lippincott Williams & Wilkins

Knowledge in the field of urologic pathology is growing at an explosive pace. Today's pathologists, specialists, and residents require a comprehensive and authoritative text that examines the full range of urological diseases and their diagnosis. Written by recognized leaders and educators in the field, the text provides readers with a detailed understanding of all diagnostic aspects of urological disease. Inside this unique resource, readers will explore a broad spectrum of practical information—including etiology, diagnostic criteria, molecular markers, differential diagnosis, ancillary

tests, and clinical management. This is sure to be the new definitive text for urological pathology!

Cutaneous

Melanoma *Springer*

Written by the leading melanoma experts from the United States, Australia, and Europe, this new edition incorporates the clinical outcomes of more than 70,000 patients treated at major melanoma centers throughout the world and is the definitive and most authoritative textbook on melanoma used worldwide. Providing the most up-to-date and comprehensive information needed for the clinical management and scientific study of melanoma, *Cutaneous Melanoma*, 6th edition

covers everything from precursors of melanoma to advanced stages of metastatic disease.

IASLC Staging Handbook in Thoracic Oncology

Gastrointestinal Oncology

A Practical Guide
Springer Science & Business Media

Gastrointestinal Oncology is an evidence-based, practical reference intended to assist in the diagnosis and management of patients with gastrointestinal malignancies. It is designed to be as user friendly as possible and is distinguished by the extremely practical, concrete nature of the information presented

and by the multidisciplinary approach adopted. In addition to disease-oriented chapters spanning sites from the esophagus to the anus, non-anatomic subjects such as modern imaging techniques are also addressed. Translational science is supplied where useful in the decision-making process. All of the authors are internationally recognized experts. This book is an ideal resource for oncologists, surgeons, gastroenterologists, and primary-care providers looking for the latest and best information on how to deal with a wide variety of gastrointestinal neoplasms.

Cancer Grading

Manual *Springer Science & Business Media*

This is the second edition of a practice-oriented, well-illustrated manual on the microscopic grading of tumors. After an introduction on the history and basic tenets of tumor grading, subsequent chapters focus on specific organ systems. In each case, the most widely used system for grading common tumors is presented and discussed. Throughout, careful attention is paid to the principles of microscopic tumor grading, ancillary methods to improve grading, and the latest techniques used in evaluating tumors and formulating prognosis. Since the first edition, all chapters have been

updated to reflect revisions in the clinical practice of pathology and to explain the role of novel immunohistochemistry and molecular biology techniques. In addition, a new chapter is devoted to the latest trends in cancer grading, and further illustrations have been included. Cancer Grading Manual is a superb resource for both diagnostic surgical pathologists and pathology residents.

Clinical Fundamentals for Radiation Oncologists

The profession of radiation oncology remains one of the most complex medical subspecialties, which requires an integrated understanding of

radiation physics and technical aspects of radiation treatment planning and delivery; cancer and radiation biology; and, most importantly, the clinical oncology. Moreover, the profession continues to undergo revolutionary changes that require radiation oncologists to rapidly adopt and implement new clinical discoveries and technical innovations. The breadth of these changes can overwhelm busy practitioners, who struggle to keep abreast of the thousands of research articles and the number of changes in treatment techniques. To help with this, Hasan Murshed, M.D., M.S., has produced this text entitled, *Clinical Fundamentals for Radiation Oncologists*, which follows his acclaimed 2006 publication of *Clinical Fundamentals for Radiation Oncology Residents*. *Clinical Fundamentals for Radiation Oncologists* is a unique resource for busy radiation oncologists. First, it is a comprehensive text that includes review of the basic sciences underlying the field of radiation oncology, important overviews of the current state of knowledge for all common cancers managed by radiation oncologists, a concise overview of modern radiation treatment techniques, and discussion of palliative care and symptom management. In addition to this, another attractive feature about this book

is its ease of use. Information is laid out for efficient utilization, with bulleted key points and effective tabulation of relevant data. The annotated bibliography not only lists the most relevant current literature but also provides the reader a capsule summary of the most important results and clinical relevancy of these studies. The efficient presentation of such material will no doubt be very useful for radiation oncologists who have only minutes to prepare for an upcoming tumor board discussion. Radiation oncologists practice evidenc

Endobronchial Ultrasound-Guided Transbronchial Needle Aspiration

(EBUS-TBNA): A Practical Approach

*Karger Medical and
Scientific Publishers*

This high-yield reference book focuses on the clinical, technical, and pathological aspects of endobronchial ultrasound-guided transbronchial needle aspiration (EBUS-TBNA). Its reviews cover all aspects of EBUS-TBNA, including the clinical perspective, technical aspects of the procedure, and cytomorphology of common and uncommon entities, as well as highlights diagnostic challenges. Each chapter features a multitude of full-color high-resolution images and includes key references to the current literature in the

field. Additionally, reference tables and informative figures highlight the salient points. The book is unique in that it is written by experienced thoracic surgeons, pulmonary medicine physicians, and cytopathologists who use EBUS-TBNA in a large medical center. This publication is of interest to individuals learning and practicing cytopathology, in addition to clinicians practicing pulmonary/thoracic medicine or surgery. In short, it provides important pearls of wisdom to create a comprehensive reference for all physicians involved with EBUS-TBNA.

Manual for Staging of Cancer *Lippincott Williams & Wilkins*

Management of Thyroid Nodules and Differentiated Thyroid Cancer

A Practical Guide
Springer

This book provides a comprehensive, state-of-the-art review of this field, and will serve as a valuable resource for clinicians and researchers with an interest in the management of thyroid nodules and cancer, including both surgeons and endocrinologists. The book reviews new data about risk factors for nodular disease and cancer, details the management of toxic and non-toxic benign thyroid nodular disease, discusses controversies in the management of indeterminate thyroid nodules and cancer,

and reviews the latest data on use of molecular testing for diagnosis and prognosis. Lastly, the book reviews the management of difficult-to-treat thyroid cancers. Management of Thyroid Nodules and Differentiated Thyroid Cancer: A Practical Guide will serve as a useful resource for physicians and researchers dealing with, and interested in thyroid nodular disease and cancer. It will provide a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts. All chapters are written by experts in their fields and include the most up to date scientific and clinical

information.

Rectal Cancer Treatment *Springer Science & Business Media*

Rectal cancer is one of the most prevalent cancers world-wide. It is also a paradigm for multimodal management, as the combination of surgery, chemotherapy and radiotherapy is often necessary to achieve the optimal outcome. Recently, international experts met in Heidelberg, Germany to discuss the latest developments in the management of rectal cancer, including the anatomic and pathologic basis, staging tools, surgical concepts including fast-track surgery and laparoscopic resection, functional outcome after surgery and the

role of radio- and chemotherapy. This monograph summarizes this meeting and gives an extensive overview of the current concepts in management of rectal cancer.

Upper Urinary Tract Urothelial Carcinoma

Springer

Upper Urinary Tract Urothelial Carcinoma was at one time felt to be a somewhat rare entity. With the success of various treatments for bladder urothelial carcinoma, the incidence of this disease in the uretere and kidney is rising. Many medical subspecialists encounter these complex patients and a multimodality treatment plan is often required for care.

Principles and Practice of Lung Cancer

The Official Reference Text of the International Association for the Study of Lung Cancer (IASLC)

Lippincott Williams & Wilkins

Thoroughly revised and updated, this Fourth Edition is the most comprehensive, current reference on lung cancer, with contributions from the world's foremost surgeons, radiation oncologists, medical oncologists, pulmonologists, and basic scientists. Coverage includes complete information on combined modality treatments for small cell and non-small cell lung cancer and on complications of

treatment and management of metastases. Emphasis is also given to early detection, screening, prevention, and new imaging techniques. This edition has expanded thoracic oncology chapters including thymus, mesothelioma, and mediastinal tumors, more detailed discussion of targeted agents, and state-of-the-art information on newer techniques in radiotherapy. Other highlights include more international contributors and greater discussion of changes in lung cancer management in each region of the world. A new editor, Giorgio Scagliotti, MD from the University of Turin, has coordinated the accounts of European activities. A companion

website includes the full text online and an image bank.

TOP KNIFE: The Art & Craft of Trauma Surgery *tfm*

Publishing Limited
This book will help you take a badly wounded patient to the operating room, organize yourself and your team, do battle with some vicious injuries and come out with the best possible result. It is a practical guide to operative trauma surgery for residents and registrars, for general surgeons with an interest in trauma, and for isolated surgeons operating on wounded patients in military, rural or humanitarian settings. A surgical atlas may show you what to do with your hands but not how to

think, plan and improvise. Here you will find practical advice on how to use your head as well as your hands when operating on a massively bleeding trauma patient. The first part of this book presents some general principles of trauma surgery. The second part is about trauma surgery as a contact sport. Here we show you how to deal with specific injuries to the abdomen, chest, neck and peripheral vessels. The single most important lesson we hope you will derive from this book is to always keep it simple because, in trauma surgery, the simple stuff works.

High-Risk Cutaneous Squamous Cell Carcinoma

A Practical Guide for Patient Management *Springer*

This book is a cutting-edge resource that provides clinicians with the up-to-date practical knowledge required in order to manage SCC patients optimally. It summarizes newly available information relating to the definition of high-risk SCC, its pathophysiologic underpinnings, and its management. New prognostic information and staging systems are summarized that enable high-risk tumors to be defined more precisely than ever before. Many helpful tips are provided on the practical management of challenging cases, including multiple tumors/field cancerization, high-risk

tumors, nodal metastases, and unresectable disease. The authors are all acknowledged experts in the emerging field of high-risk and advanced SCC.

TNM Atlas *John Wiley & Sons*

The complete, authoritative TNM cancer classification and staging system—now illustrated with new, full-colour figures for fast, effective, anatomical referencing Referring to “Tumour,” “Node,” and “Metastasis,” the TNM system is the most widely used means for classifying and staging the extent of cancer spread. Published in affiliation with the Union for International Cancer Control (UICC), TNM Atlas, Sixth

Edition presents the illustrated version of the TNM Classification of Malignant Tumours, Seventh Edition, promoting the uniform application of the TNM classification in cancer practice. Utilizing beautiful, full-colour medical artwork—illustrating the T and N categories in clear, easily understood graphics—this book aides in the practical application of the TNM classification system. It enables all disciplines involved in cancer classification, staging, and treatment to reach a more standardized understanding and documentation of the anatomical spread of tumours, and further enhances the dissemination and use of the TNM classification. The TNM

Atlas, Sixth Edition: • Is based upon the very latest TNM Classification data available in TNM Classification of Malignant Tumours, Seventh Edition • Features over 500 full-colour figures that clearly illustrate and highlight anatomical sites of cancer involvement • Makes TNM classification even more clinically applicable in the day-to-day environment • Is an extremely useful tool for clinical reference, teaching, discussion, and patient education Based in Geneva, the UICC is one of the most widely affiliated cancer organisations in the world, with its core mission being cancer classification and control. Its TNM Atlas, Sixth Edition is a valuable reference for all medical, surgical, and radiation oncologists, anatomical and surgical pathologists, cancer registrars, oncology nurses and physician extenders, international cancer care centres, and governmental and NGOs dedicated to cancer control. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from Google Play.

Fundamentals of Radiation Oncology

Physical, Biological, and Clinical Aspects *Academic Press*

Fundamentals of Radiation Oncology: Physical, Biological, and Clinical Aspects, Third Edition continues to provide current,

concise, and a readily available source of clinical information for busy practicing radiation oncologists. The book consists of 26 chapters, divided into four parts: Part I describes the basic science of radiation oncology, with discussions of radiation physics, radiation protection, and radiation biology, as well as molecular biology. Part II describes techniques and modalities of radiation oncology including brachytherapy, intensity-modulated radiation therapy (IMRT), stereotactic radiotherapy (SRS), stereotactic body radiation therapy (SBRT), and proton therapy. Significant recent advances made in the areas of

immunotherapy and combined modality therapy; as such, these chapters have also been added to this new edition. Part III describes the clinical science of radiation oncology including risk factors, symptoms/signs, and investigations needed for the cancer diagnosis and up-to-date treatment recommendations in accordance with the new AJCC staging system. In addition, radiation treatment techniques, with an emphasis on IMRT, have been expanded to all the chapters. Also included in this version of the book is a chapter on benign diseases. Updated annotated bibliographies of latest landmark studies providing evidence-

based rationale for the recommended treatments are presented at the end of each chapter. Part IV describes palliative radiation treatments to improve the quality of life for cancer patients and the management of side effects from radiation treatment. This book is a must-have for all radiation oncology residents, radiation oncologists and all professionals engaged in the care of cancer patients. New chapters on brachytherapy, IMRT/IGRT, SRS, SBRT, proton therapy, immunotherapy, combined modality therapy, and benign diseases Eighth edition of the AJCC staging system IMRT techniques for all common cancer sites, along with up-to-date

treatment recommendations Relevant, landmark studies that provide evidence-based rationale for recommended treatments

Emerging Biomarkers for NSCLC: Recent Advances in Diagnosis and Therapy *Frontiers Media SA*

Gastric Cancer *Lippincott Williams & Wilkins*

Advances in Surgical Pathology: Gastric Cancer provides a concise, updated review of the pathological characteristics of gastric cancer, with an emphasis on exploring practical issues and recent developments. The book features

current and emerging concepts in the field of gastric cancer, a disease whose management requires a multidisciplinary approach in which pathology plays a key role. Its six sections cover the essential histopathology of gastric cancer as well as related topics such as imaging evaluation, molecular diagnosis, and personalized treatment, among other areas of interest. Individual chapters written by international experts in the fields of pathology, gastrointestinal medical oncology, cancer epidemiology, and gastrointestinal radiology, address the fundamental issues surrounding gastric cancer, including its epidemiology, basic diagnostic features,

differential diagnoses, pitfalls and complications, and treatments. Endoscopic evaluation and histology correlation are emphasized. The screening, clinical management, and treatment of gastric cancer are summarized in related book sections. Recent findings regarding the roles of immunohistochemistry and molecular testing in the diagnosis, prognosis, and personalized treatment of gastric cancer are also reviewed. The book also includes current knowledge regarding the molecular alteration of gastric cancer carcinogenesis and its impact on patient care.

Breast Surgical Techniques and

Interdisciplinary Management

Springer Science & Business Media

This comprehensive manual on breast disease deals with all aspects of the surgical management of both benign and malignant disease. The chapters are written by leading experts, clearly illustrated with line drawings, clinical photos and diagnostic radiology images. Breast Surgery is divided into sections following the patterns of patient management from diagnosis through treatment and reconstruction. Part One, "Fundamentals", addresses common aspects of working with breast cancer patients and understanding the members of the breast cancer team. Part Two is an overview of

"Biologic Principles". Parts Three, Four, and Five review "The Initial Evaluation", "Common Presenting Problems", and "Diagnostic Techniques". Part Six, an overview of breast cancer treatment, includes chapters on "Breast Cancer Staging", "Introduction to Gene Expression Profiling", and "Psychological Issues". Part's Seven through Twelve deal with important aspects of breast surgery and interdisciplinary care including pathology, medical oncology, and radiation oncology, with several chapters on neoadjuvant therapy and partial breast irradiation. Part Thirteen includes many chapters on followup of the breast cancer survivor, including late changes on physical

exam and imaging, local recurrence, and treating metastatic disease. Though not intended to replace a text reference, Breast Surgical Disease and Interdisciplinary Management offers a comprehensive guide to provide practical advice for those seeking concise, expert input that can be quickly accessed on multiple topics associated with the care of the breast cancer patient.
