The Gear Hobbing Process

Gear hobbing is a generating process. The term generating refers to the fact that the gear tooth form cut is not the conjugate form of the cutting tool, the hob. During hobbing both the hob and the workpiece rotate in a continuous rotational relationship. During this

rotation, the hob is typically fed axially with all the teeth being gradually formed as the tool traverses the work face (see Fig. 1a). Keywords

The Gear Hobbing Process : Gear Technology January ...

Hobbing is a machining process for gear cutting, cutting splines, and cutting sprockets on a hobbing machine, which is a special type of milling machine. The teeth or splines of the gear are progressively cut into the material (a flat, cylindrical piece of metal) by a series of cuts made by a cutting tool called a hob. Compared to other gear forming processes it is relatively inexpensive but ...

Hobbing - Wikipedia

Bobbing is a generating process, and the hob will not cut the same shape as the cutting tool form. An unmodified involute gear tooth is produced by a hob with straight-sided cutting edges. Involute gear cutting is the largest application of bobbing (Fig. 2). In contrast, a straight-sided spline tooth is produced by a hob with curved cutting edges (see Fig. 3).

Gear cutting - tec-science

Hobbing is the process of roughly, quickly cutting teeth in a gear. A hob is a rotary device which, used for worm, spur or helical gears. Is often used for a known gear type or mass production where cost efficiency is paramount.

Difference between gear hobbing and gear shaping ...

During gear hobbing the size of a gear is

measured throughout the production run as a process control by the operator. As shown in Figure 1, this measurement is normally done using balls or pins of a specified diameter to contact the gear tooth profile at the pitch diameter. For larger gears a span measurement over several gear teeth will be done.
