Hyperbolas have a body like two parabolas, an equation like an ellipse, and the soul of a champion. Hyperbolas have a center at (h, k), which will be right in the middle of the two curves. To find the vertices, shout out "Marco" and wait for them to say "Polo" back. Or check out the positive term in the equation.

Hyperbolas - Homework Help & Study Guides For Students

If $B^2 - 4AC = 0$, the conic is a parabola. Another way to classify conics has to do with the product of A and C. Assuming a conic is not degenerate, the following conditions hold true: if $AC > 0$, the conic is an ellipse or a circle. If $AC < 0$, the conic is a hyperbola.
