Vacuum box testing provides for the detection of through-thickness leaks and is most commonly used for testing welds. Cracks, pores, and lack of fusion are typical causes of leaks detectable by this method. A bubble-forming solution is applied to the surface to be tested by flowing, spraying, or brushing the solution over the examination area.

Vacuum Box Testing - Applied Technical Services

The test uses a box fitted with rubber seals around its open bottom and a plexiglass top cover. The weld section to be inspected is coated with a soap-like solution and a light vacuum, usually under 69 kPa (10 psi) is applied to the box. The formation of bubbles on the soaped weld indicates the location of a leak.

Vacuum Box Testing Services | LBNIW — NDT Weld Examination ...

Vacuum Box Testing. Vacuum box testing is a non-destructive examination used when trying to locate weld seam leaks. A vacuum box and a compressor create a high or low pressure vacuum while a detergent solution is applied to the test area. The detergent bubbles, making leaks visible within the created pressure envelope.

Vacuum Box Testing, Weld Bubble Leak An efficient method for leak testing welds is using a vacuum box to pull negative pressure on one side while

then looking for bubbles through a soap solution. The test is performed by one person. The vacuum box is a clear Plexiglas plate with soft gasketing around the edges.

Vacuum Box Testing

For this test you dont need a vacuum pump, most vacuum boxes operate on Compressed Air (Yes). And compressed air is usually available on most Sites. You need a vacuum pump only if the Site you are working does not have compressed air supply. The equipment is not expensive and should be available with most NDT suppliers/stockists

Re: Vacuum Box Testing

Vacuum box bubble test is one of the safest and reliable non-destructive test method. The vacuum box bubble test can locate leaks in the test area that cannot be directly pressurized. The test is performed by applying a detergent solution on the test area and creating a vacuum around the test surface by external mechanism e.g. vacuum box. The detergent solution will bubble if there is any leakage through the test area.

NDT - vacuum Box (Bubble) Test - LMATS

TSP Vacuum Devices for Leak Testing. Simple to Operate: The air ejector has no moving parts and no lubrication is necessary. After applying leak detection fluid along the seam, simply place the vacuum device over the area to be detected and open the air valve. Rugged Yet Lightweight:
