In this set of lectures, we will start with a brief pedagogical introduction to abelian anyons and their properties. This will

essentially cover the background material with an introduction to basic concepts in anyon physics, fractional statistics, braid groups and abelian anyons. The next topic that we will study is a specific exactly solvable model, called the toric code model, whose ...

In mathematics, and specifically in group theory, a non-abelian group, sometimes called a non-commutative group, is a group $(G, *)$ in which there exists at least one pair of elements a and b of G , such that $a * b \neq b * a$. This class of groups contrasts with the abelian groups. (In an

abelian group, all pairs of group elements commute).

In 1954, attempting to resolve some of the great confusion in elementary particle physics, Chen Ning Yang and Robert Mills introduced non-abelian gauge theories as models to understand the strong interaction holding together nucleons in atomic nuclei.
