Diseases Of The Kidneys Ureters

Sometimes the ureters can become blocked or injured. This can block the flow of urine to the bladder. If urine stands still or backs up the ureter, you may get a urinary tract infections. Doctors diagnose problems with the ureters using different tests. These include urine tests, x-rays, and examination of the ureter with a scope called a cystoscope.

Ureteral Disorders | Ureters | Ureter Function | MedlinePlus

Like other systems in the body, the entire urinary tract is subject to diseases and disorders. In kids, the more common problems include: Congenital problems

of the urinary tract. As a fetus develops in the womb, any part of the urinary tract can grow to an abnormal size or in an abnormal shape or position. One common congenital abnormality (an abnormality that exists at birth) is duplication ...

Kidneys and Urinary Tract Problems

Urine formed in the kidneys flows through the ureters into the bladder, but it does not flow passively. The ureters push each small amount of urine along in waves of contraction, at low pressure. At the bladder, each ureter passes through an opening in the bladder wall, which closes when the bladder contracts to prevent urine from flowing back into the ureter (reflux).

Ureters - Kidney and Urinary Tract Disorders - MSD Manual ...

There may be obstructions due to congenital atresia or to various diseases and neoplasms. The result of such a condition is a dilatation of the ureter above the obstruction and of the kidney (hydronephrosis). Pyelitis, or inflammation of the pelvis of the kidney, is met with in the course of various infectious diseases, as typhoid fever, scarlet fever, smallpox.

Ureter - Wikipedia

Retroperitoneal fibrosis. This rare disorder occurs when fibrous tissue grows in the area behind the abdomen. The fibers may grow due to cancers or may result from taking certain medicines used to treat migraines. The fibers encircle and block the ureters, causing urine to back up into the kidneys.

Ureteral obstruction - Symptoms and causes - Mayo Clinic

The urinary system, also known as the renal system or urinary tract, consists of the kidneys, ureters, bladder, and the

urethra. The purpose of the urinary system is to eliminate waste from the body, regulate blood volume and blood pressure, control levels of electrolytes and metabolites, and regulate blood pH. The urinary tract is the body's drainage system for the eventual removal of urine.

Urinary system - Wikipedia

Urine formed in the kidneys flows through the ureters into the bladder, but it does not flow passively. The ureters push each small amount of urine along in waves of contraction, at low pressure. At the bladder, each ureter passes through an opening in the bladder wall, which closes when the bladder contracts to prevent urine from flowing back into the ureter (reflux).
