Sickle cell disease is caused by a gene that affects how red blood cells develop. If both parents have the gene, there's a 1 in 4 chance of each child they have being born with sickle cell disease. The child's parents often will not have sickle cell disease themselves and they're only carriers of the sickle cell trait.

Sickle cell disease - NHS

Administrator. Sickle cell anemia, also known as sickle cell disease, is a common genetic disorder that affects the red blood cells and is an inherited form of hemolytic anemia, said to be more prevalent in African American individuals. It is a condition in which there are not enough healthy red blood cells to carry adequate oxygen throughout the body and to all of its vital organs.

Sickle Cell Anemia is an inherited disease of the red blood cells. Normal red blood cells are usually round and flow easily in the blood stream. However, the sickle cells take more of a crescent shape and often block blood flow to the organs. This causes sickle cell patients to have damaged organs and suffer from severe pain, anemia, and infections.
