Autoimmune disease results from an inability of the immune
system to differentiate self-antigens from those of a foreign and
harmful organism. Since the immune system is forced to deal
with an unforeseeable variety of pathogens, it is impossible to
design an effective immune system that is incapable of reacting
against self-antigens.

Figure 35.1 An athlete’s nervous system is hard at work during the planning and execution of a movement as precise as a high jump. Parts of the nervous system are involved in determining how hard to push off and when to turn, as well as controlling the muscles throughout the body that make this complicated movement possible without knocking the bar down—all in just a few seconds.
