Reinforced Concrete (RC) and Steel buildings under the action of lateral loads, especially during earthquakes. Since most buildings built in India are made of RC, the dominant set of examples used is of RC buildings. But, with no loss of generality, the broad concepts discussed in this document are valid for both RC and Steel buildings.

Some Concepts in Earthquake Behaviour of Buildings

A series of multistory RC frames were designed for gravity loads only (1.4D.L+1.7L.L) without considering the seismic loads as typically found in most seismic prone countries before the introduction of adequate seismic design code provisions. All frame models have a constant 3m story height except the ground story is 4m (Fig.2).
