Soil Conservation Service Curve Number

The runoff curve number (also called a curve number or simply CN) is an empirical parameter used in hydrology for predicting direct runoff or infiltration from rainfall excess. The curve number method was developed by the USDA Natural Resources Conservation Service , which was formerly called the Soil Conservation Service or SCS — the number is still popularly known as a "SCS runoff curve number" in the literature.

Runoff curve number - Wikipedia

The Soil Conservation Service (SCS) curve number (CN) method is one of the most popular methods for computing the runoff volume from a rainstorm. It is popular because it is simple, easy to understand and apply, and stable, and accounts for most of the runoff producing watershed characteristics, such as soil type, land use, hydrologic condition, and antecedent moisture condition.

This model component is usually called the “loss function” or the “infiltration submodel.” The most commonly quoted empirical model of this type is probably the Soil Conservation Service Curve Number (SCS-CN) method [U.S. Department of Agriculture, 1954; Ponce and Hawkins, 1995]. It is based on a tremendous amount of experimental work, has been widely used in the United States and across the world, and has more recently been integrated into several rainfall-runoff models.

Soil Conservation Service Curve Number method: How to mend ...

The SCS curve number method is a simple, widely used and efficient method for determining the approxient amount of runoff from a rainfall even in a particular area. Although the method is designed for a single storm event, it can be scaled to find average annual runoff values. The stat requirments for this method are very low, rainfall amount and curve number.

More Information - SCS Curve Number Method

The Soil Conservation Service Curve Number (SCS-CN) method was developed in 1954 and is documented in Section 4 of the National Engineering Handbook (NEH-4) published by the Soil Conservation Service (now called the Natural Resources Conservation Service), U.S. Department of Agriculture in 1956. The document has since been revised in 1964, 1965, 1971, 1972, 1985, and 1993.
