Synopsis. "Since the 1960s, Swedish musicologist Nils Wallin has been exploring man's biological inheritance and its relationship to music. This book, the culmination of these many years of investigation, offers a musicological interpretation of recent research in neurophysiology and paleobiology. A model of music as a natural system which serves as a foundation for the understanding of our musical mind, its capacity, and its phylogenetic roots is proposed.

Biomusicology is the study of music from a biological point of view. The term was coined by Nils L. Wallin in 1991 to encompass several branches of music psychology and musicology, including evolutionary musicology, neuromusicology, and comparative musicology. Evolutionary musicology studies the "origins of music, the question of animal song, selection pressures underlying music evolution", and "music evolution and human evolution".

N. Wallin, B. Merkur, +1 authorW. J. Freeman. Published1998. Psychology. Music is regarded in biological terms as originating in the brain, so that most explanations concentrate on the ways in which brains process information. Recent studies of the nonlinear dynamics of the primary sensory cortices have shown that the patterns that are constructed by chaotic nonlinear dynamics in cortical neuropil replace stimulus driven activity.
