Solid and Laminated Wood Bending: Amazon.co.uk: Stevens, W ...

Generally, the laminated wood achieves higher bending capability and flexibility than the solid wood. The laminated wood does not exhibit so significant inner structural rupture as the solid wood does. Therefore, the cyclic stress impact was found to be greater for the solid wood. Fig. 7.

Effect of cyclic loading on the elasticity of beech solid ...

Bending stretches wood along the outer side of the bend, and compresses it along the inner side, producing stress that wants to bring the bent piece back to its original shape, a tendency called "springback." Steaming softens the lignin to release this stress. When cooled, the lignin hardens, fixing the wood in the new shape.
