Answer: B. The speed of a wave in a wire is given by the equation. $v = \text{SQRT} (F \text{ tens} / \mu)$ where F tens is the tension of the wire and a measure of

how tight it is pulled and μ is the linear density of the wire and a measure of how light it is on a per meter basis. Tighter wires allow for faster speeds. Light wires allow for faster speeds.

A sound wave is a mechanical wave that propagates along or through a medium by particle-to-particle interaction. As a mechanical wave, sound requires a medium in order to move from its source to a distant location. Sound cannot travel through a region of space that is void of matter (i.e., a vacuum).
