Ferrite, a ceramic-like material with magnetic properties that are useful in many types of electronic devices. Ferrites are hard, brittle, iron-containing, and generally gray or black and are polycrystalline— i.e., made up of a large number of small crystals. They are composed of iron oxide and one or more other metals...

Magnetic ceramics - Magnetic storage | Britannica

The magnetic separators attract and remove any magnetic particle before the ceramic is fired. In this blog, we review a typical ceramic tableware plant and identify locations and magnetic separator designs to successfully remove iron from the process. Magnetic separators used in the ceramics industry; Location RM-1 - Raw Material Infeed. Raw materials such as feldspar, zircon sand, silica ...

Keeping Ceramic Tableware Iron Blemish Free | Bunting ...

Ceramic magnets are manufactured using powder technology techniques. The primary raw material - ferrite - is made by using iron oxide and strontium carbonate. These materials are mixed together and then elevated in temperature to 1800-2000 degrees F. At this temperature they undergo a chemical conversion and the resulting material is ferrite.
