Abstract. In this paper, a meshless method, finite point method, is studied and applied to model metal solidification processes in continuous casting. An additional term is added to stabilize the computation with Neumann boundary. The enthalpy method is used to calculate the latent heat and the corresponding iterative solution is given.

Solidification modeling in continuous casting by finite ...

The new solidification model computes the solidification path and material properties, including latent heat, thermal conductivity, heat capacity, density, viscosity, etc. from the evolution of temperature and chemistry considering nucleation, segregation, and cooling conditions. The solidification model predicts the microstructure evolution based on composition and cooling conditions, such as secondary dendrite arm sapcing (SDAS) and grain size.
