The Wind Chill Factor

Wind chill factor takes into account wind speeds and humidity to assess how the human body actually feels temperature. Wind chill The 'feels like' temperature is different to the actual air...

Wind chill factor - Met Office

The wind chill factor is the temperature that a person feels due to the wind. This is different to the air temperature, and many weather forecasts distinguish between the two by stating what the actual temperature is, as well as the 'feels like' temperature. A breeze can make it feel colder than it actually is, because when air circulates and blows across our skin, heat is lost from our bodies by evaporative cooling.

What is the wind chill factor? - How It Works

Wind-chill or windchill (popularly wind chill factor) is the lowering of body temperature due to the passing-flow of lower-temperature air. Wind chill numbers are always lower than the air temperature for values where the formula is valid. When the apparent temperature is higher than the air temperature, the heat index is used instead.

Wind chill - Wikipedia

What is the wind chill factor? The Met Office describes wind chill as the "feels like temperature" and if you experience it you will agree. So for example, say the temperature is 3C, a particularly...

What is wind chill factor, how is it calculated and what ...

Wind chill factor was designed for a limited purpose. It measures heat loss from exposed areas of the human body, like hands and face, in low temperatures and measured wind speeds.

How to Calculate a Wind Chill Factor | Sciencing

"The Wind Chill Factor," published in 1975, was his first. The protagonist is John Cooper, scion of the affluent Cooper family of Cooper's Falls, Minnesota. In the early 1970s John is a 34-year old writer living in Cambridge, Massachusetts, when he receives an urgent telegram from his brother, Cyril: "Meet me in Cooper's Falls.

The Wind Chill Factor by Thomas Gifford - Goodreads

The lower the temperature, the more impact the wind has. The equivalent of wind chill for warmer temperatures is the heat index - humidity is a major factor. These terms are needed because degrees...

Who, What, Why: What is wind chill factor? - BBC News

The following formula is used to calculate the wind chill factor W in degree Celsius. $(10.45 + 10 V - V) (33 - 0.7 T)$ W = 33 - 22.04 T is the air temperature in degree Celsius and V is the wind speed in meters per second. Use the formulas to the right as needed.
