In the stochastic transformation, as in the stochastic goal programming by Aouni et al. (2005) the multiobjective problem is first aggregated to obtain a uniobjective stochastic program which is solved by a stochastic programming approach. For both previous transformations, random constraints have to be addressed first as it is hard to solve a problem where the feasible set is not deterministic.

Chapter 5 is devoted to statistical inference in stochastic programming. The starting point of the analysis is that the probability distribution of the random data vector is approximated by an empirical probability measure. Consequently, the “true” (expected value) optimization problem is replaced by its sample average approximation (SAA).
