Computer control of machines and processes (Book, 1988 ...

Process control systems (PCS), sometimes called industrial control systems (ICS), function as pieces of equipment along the production line during manufacturing that test the process in a variety of ways, and return data for monitoring and troubleshooting. Many types of process control systems exist, including supervisory control and data acquisition (SCADA), programmable logic controllers (PLC), or distributed control systems (DCS), and they work to gather and transmit data obtained during ...

All About Process Control Systems (PCS)

Numerical control is the automated control of machining tools and 3D printers by means of a computer. A CNC machine processes a piece of material to meet specifications by following a coded programmed instruction and without a manual operator directly controlling the machining operation. A CNC machine is a motorized maneuverable tool and often a motorized maneuverable platform, which are both controlled by a computer, according to specific input instructions. Instructions are delivered to a CNC

Numerical control - Wikipedia

Automation and control of processing equipment by highly sophisticated computer control systems is the standard at process facilities. Automatic control provides for closer control of the preprocess conditions and therefore increased efficiencies. Increased efficiencies allow higher production outputs.

Computer Control Systems - an overview | ScienceDirect Topics

The control unit (often called a control system or central controller) manages the computer's various components; it reads and interprets (decodes) the program instructions, transforming them into control signals that activate other parts of the computer. Control systems in advanced computers may change the order of execution of some instructions to improve performance.
