Some of the internal node measured waveforms of the tri- state FSK demodulator can be seen in Fig 5a. From the top: the capacitor voltage (VC), C2bit, Data_Out (inverted), and CKin. In this experiment CKin is generated by a digital I/O card, while choosing f_0 , f_N , and f_{lequal} to 250, 215, and 180 kHz respectively.

FSK: Signals and Demodulation - RF Cafe

The classic “matched” filter demodulator is optimal for coherent

FSK in white gaussian noise interference. Other filter-type
 demodulators are used for noncoherent FSK and/or non-
 stochastic noise environments. A block diagram of a simple,
 matched-filter demodulator for coherent FSK is shown in Figure
 14.

FSK: Signals and Demodulation - EDGE

Step 4: Demodulation. Now it's the perfect time to do the
 demodulation. The transmitter uses FSK which is basically a form
 of digitally controlled Frequency Modulation where ones and
 zeros are transmitted as tones below and above the center
 frequency. If you take a look at the baseband spectrum from Step
 2 you will clearly notice two peaks in the spectrum that are the
 result of transmitter ...

FSK Demodulation FSK demodulator is a very beneficial
 application of the 565 PLL. In this, the frequency shift is generally
 proficient by motivating a VCO with the binary data signal. So

 states of the binary data signal.
