Neutron Imaging and Applications - Springer

Neutron imaging is the process of making an image with neutrons. The resulting image is based on the neutron

attenuation properties of the imaged object. The resulting images have much in common with industrial X-ray images, but since the image is based on neutron attenuating properties instead of X-ray attenuation properties, some things easily visible with neutron imaging may be very challenging or impossible to see with X-ray imaging techniques. X-rays are attenuated based on a material's density
