Principles of Thermal Spraying - Plasma-Spray Coating ...

Plasma spray is a process by which the powders of metallic/non-metallic materials are melted and sprayed them onto a sample. The process is used to apply protective coatings on components to protect the materials from corrosion, wear, and high temperatures. Coatings having thickness between 200-250 micron is

A Review on Plasma Spray Coatings and its characterization

The plasma spray coating process involves spraying a substrate with molten or semi-molten material to create a hard coating that protects against oxidation and corrosion wear caused by environmental and operating conditions. The coatings are dense and strong, making plasma coating a favorable option for equipment protection and refinishing.
