I had hoped to find an

explanation of brain anatomy from first principles, perhaps along the lines of Fred Rieke's *Spikes*. Although there are hints of this in introductions and conclusions, most of the book is very similar to other neuroscience books, primarily listing receptors and nuclei of the visual system.

Principles of Neural Design by Peter Sterling (2015-07-03 ...

The human brain is far smarter than a supercomputer but requires 100,000-fold less energy and space. Such efficient information processing is governed by ten principles of design. These apply to the whole brain across the full range of spatial and temporal scales, and to the brains of all species. The principles are: compute with chemistry; compute directly with analog primitives; combine

analog and pulsatile processing; code sparsely; send only what information is needed for a particular task;
