Thermodynamik

Thermodynamics is a branch of physics that deals with heat, work, and temperature, and their relation to energy, radiation, and physical properties of matter. The behavior of these quantities is governed by the four laws of thermodynamics which convey a quantitative description using measurable macroscopic physical quantities, but may be explained in terms of microscopic constituents by ...

Thermodynamik är läran om energi, dess omvandling mellan olika former och särskilt samspelet mellan värme och arbete. Den klassiska termodynamiken studerar kopplingen mellan makroskopiska egenskaper som temperatur, volym och tryck hos system samt hur dessa påverkas och förändras genom termodynamiska processer. Termodynamikens grundprinciper har under åren kommit att formuleras i fyra ...

The four fundamental laws of thermodynamics express empirical facts and define physical quantities, such as temperature, heat, thermodynamic work, and entropy, that characterize thermodynamic processes and thermodynamic systems in thermodynamic equilibrium. They describe the relationships between these quantities, and form a basis for precluding the possibility of certain phenomena, such as ...
