Theory Of Mathematical Structures

In universal algebra and in model theory, a structure consists of a set along with a collection of finitary operations and relations that are defined on it. Universal algebra studies structures that generalize the algebraic structures such as groups, rings, fields and vector spaces. The term universal algebra is used for structures with no relation symbols. Model theory has a different scope that encompasses more arbitrary theories, including foundational structures such as models of set theory.

In mathematics, a structure is a set endowed with some additional features on the set. Often, the additional features are attached or related to the set, so as to provide it with some additional meaning or significance. A partial list of possible structures are measures, algebraic structures, topologies, metric structures, orders, events, equivalence relations, differential structures, and categories. Sometimes, a set is endowed

The second part of this paper will be treated of the analysis of spatial structure of three different plant communities (oak forest, wet meadow, old field). An example of application of the definitions of ecotones and of microcoenosis will be given there.

Category theory is a mathematical theory that deals in an abstract way with mathematical structures and

relationships between them. It is half-jokingly known as "generalized abstract nonsense". Categories appear in most branches of mathematics, and in some areas of theoretical computer science and mathematical physics, and have been a unifying notion.. Categories were first introduced by ...

The complete theory of a structure A is the set of all first-order sentences over the signature of A which are satisfied by A . It is denoted by $\text{Th}(A)$. More generally, the theory of K , a class of σ -structures, is the set of all first-order σ -sentences that are satisfied by all structures in K , and is denoted by $\text{Th}(K)$. Clearly $\text{Th}(A) = \text{Th}(\{A\})$. These notions can also be defined with respect to other logics.
