High Level Synthesis From Algorithm

High-level synthesis, sometimes referred to as C synthesis, electronic system-level synthesis, algorithmic synthesis, or behavioral synthesis, is an automated design process that interprets an algorithmic description of a desired behavior and creates digital hardware that implements that behavior. Synthesis begins with a high-level specification of the problem, where behavior is generally decoupled from low-level circuit mechanics such as clock-level timing. Early HLS explored a variety of input

High-level Synthesis: From Algorithm to Digital Circuit ...

This is the goal of high-level synthesis (HLS), and it aims to solve a fundamental problem in system design today. The basic idea is allowing hardware designers to build and verify hardware, with better control over optimization of the design architecture, describing the design at a higher level of abstraction while the tool implements the RTL. It also may be possible to use HLS to improve today’s algorithms that run on that hardware.

Moscow Synthesizer Tool (MOST-SDL) is the enabling technology for our re-engineering process. Synthesis methodology involves using extended Message Sequence Charts to formalize use cases. The input for the synthesis is a set of MSC-92 with states extended with data operations. The synthesis algorithm produces a flexible object-oriented SDL-92 model. The model is syntactically and semantically correct, and complete with respect to the input set of MSCs.

Implement algorithms in ASICs or FPGAs from high levels of abstraction. High-level synthesis is the process of converting a high-abstraction-level description of a design to a register-transfer-level (RTL) description for input to traditional ASIC and FPGA implementation workflows. This high-level design description can be expressed using a variety of methods, depending on the high-level synthesis tool, while the generated RTL is expressed as synthesizable Verilog ® or VHDL ®.

High-Level Synthesis - MATLAB & Simulink

Overview. MATLAB ® is a de facto standard algorithm development tool in many image and signal processing hardware designs. Yet, the traditional path from an abstract floating-point MATLAB model to high-quality RTL code is long and often requires multiple manual coding stages, several designers and many code bases to be maintained.
