Carcinogenesis in mouse skin can be divided into three distinct stages: initiation, promotion, and progression (malignant conversion). Initiation, induced by a single exposure to a genotoxic carcinogen, can result from a mutation in a single critical gene (e.g., rasHa), apparently in only a few epidermal cells. The change is irreversible.

Delay between initiation and promotion on mouse skin was in 1949 reported by Berenblum and Shubik not to affect tumour yields, and this led to the important concept of the irreversibility of initiation and stimulated the development of multistage models. Subsequent reports have, however, suggested that delay does decrease tumour yields, and ...

Modelsfor Demonstrating Initiation andPromotion The experiments that have defined the concept ofinitiation and promotion were begun by Berenblum, who studied the production of skin tumors in mice [18]. However, the methodology has been extensively refined and extended by R.K. Boutwell ofthe McArdleLaboratory, whohasgoneonto explaintumorpromotion as geneactivation[19].

Promotion: selective growth enhancement induced in the initiated cell and its progeny by the continuous exposure to a promoting agent. Progression: results from continuing evolution of unstable

Chemical Carcinogenesis: Initiation, Promotion and Progression

The historical background of concepts of initiation and promotion are traced to

Berenblum and Mottram and the Boutwell concept of promotion as gene activation is cited. It is proposed that gene activation by promoters is a valid concept and that it results from the blocking of the normal intercellular communication postulated by Osgood and others.

Initiation and promotion in cancer formation: the ...

The concepts of initiation and promotion were first described during experiments on mouse skin carcinogenesis but have since been applied to a variety of other tissues and species. During the initiation phase of chemical carcinogenesis, a normal cell undergoes an irreversible change characterized by an intrinsic capacity for autonomous growth.
