Introduction to the Practice of African American Preaching *Abingdon Press*

The Introduction to African American Preaching is an important, groundbreaking book. This book

acknowledges African American preaching as an academic discipline, and invites all students and preachers into a scholarly, dynamic, and useful exploration of the topic. Author Frank Thomas opens with a "bus tour" study of African American preaching. He shows how African American preaching has gradually moved from an almost exclusively oral to an oral/written tradition. Readers will gain insight into the history of the study of the African American preaching tradition, and catch the author's enthusiasm for it. Next Thomas traces the relationship between homiletics and rhetoric in Western preaching, demonstrating how African American preaching is inherently theological and rhetorical. He then explores the question, "what is black

preaching?" Thomas introduces the reader to methods of "close reading" and "ideological criticism." And then demonstrates how to use these methods, using a sermon by Gardner Calvin Taylor as his example. The next chapter considers the question, "what is excellence in black preaching?" The next chapter seeks to create bridges and dialogue within the field of homiletics, and in particular, the Euro-American homiletic tradition. The goal of this chapter is to clearly demonstrate connections between the African American preaching tradition and the field of homiletics. Thomas next turns to questions about the relevancy of the church to the Millennial generation. Specifically, how will the African American church remain relevant to this

generation, which is so deeply concerned with social justice?

The Practice of Islam in America *NYU Press*

An introduction to the ways in which ordinary Muslim Americans practice their faith. Muslims have always been part of the United States, but very little is known about how Muslim Americans practice their religion. How do they

pray? What's it like to go on pilgrimage to Mecca? What rituals accompany the birth of a child, a wedding, or the death of a loved one? What holidays do Muslims celebrate and what charities do they support? How do they learn about the Qur'an? The Practice of Islam in America introduces readers to the way Islam is lived in the United States, offering vivid portraits of Muslim American life passages, ethical actions, religious holidays, prayer, pilgrimage, and other religious activities. It takes readers into homes, religious congregations, schools, workplaces, cemeteries, restaurants—and all the way to Mecca—to understand the diverse religious practices of Muslim Americans. Going beyond a theoretical discussion of what Muslims are supposed to do, this

volume focuses on what they actually do. As the volume reveals, their religious practices are shaped by their racial and ethnic identity, their gender and sexual orientation, and their sectarian identity, among other social factors. Readers gain practical information about Islamic religion while also coming to understand how the day-to-day realities of American life shape Muslim American practice.

Modern developments of Random Matrix Theory as well as pedagogical approaches to the standard core of the discipline are surprisingly hard to find in a well-organized, readable and user-

friendly fashion. This slim and agile book, written in a pedagogical and hands-on style, without sacrificing formal rigor fills this gap. It brings Ph.D. students in Physics, as well as more senior practitioners, through the standard tools and results on random matrices, with an eye on most recent developments that are not usually covered in introductory texts. The focus is mainly on random matrices with real spectrum. The main guiding threads throughout the book are the Gaussian Ensembles. In particular, Wigner's semicircle law is derived multiple times to illustrate several techniques (e.g., Coulomb gas approach, replica theory). Most chapters are accompanied by Matlab codes (stored in an online repository) to guide readers through the

numerical check of most analytical results.

Introductory Statistics

Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with

the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them.

Introduction to Human Services: Through the Eyes of Practice Settings, 3e explores human services through the

lens of the most common practice settings where human service professionals work. This title also provides information about social problems within a socio-political context allowing readers to think about ways in which culture and ideology influence people's perspectives. Standards for Excellence series -- Each chapter highlights the national standards set by the Council for Standards in Human Service Education (CSHSE). Critical thinking questions throughout reinforces this integration. MySearchLab.com activities enhance the understanding and mastery of CSHSE's national standards.
